Frank Moore Colby, Talcott Williams

Atomic Complex:

The Atomic Complex Bertrand Goldschmidt, 1982 Atomic Complex is a worldwide political history of the development of nuclear energy from its military use in the 1940s to its peaceful uses today But equally important the book is also the personal memoir of Bertrand Goldschmidt a man who was in the forefront of the effort to harness energy from the atom and who remains active today in his attempts to educate the public about the benefits of the peaceful uses of nuclear energy Atomic Complex tells the story of the development of nuclear explosives and nuclear energy from the viewpoint of a scientist turned statesman

Nuclear Culture Paul Rogat Loeb, 1986 *Philosophy and Logic in Central Europe from Bolzano to Tarski* Peter M. Simons, 2013-03-14 ways of doing it but it is wrong to project it far into the past it did not exist at the turn of the century and only became clearly apparent after the Second World War I recently taught at an American university on the his tory of philosophy from Balzano to Husserl The course title had to come from a fixed pool and gave trouble Was it philosophical logic the nine teenth century or phenomenology A logic title would connote over this period Frege Russell Carnap perhaps a mention of Boole not continental enough The nineteenth century The century of Kant s successors Fichte Hegel Schopenhauer Feuer bach Marx Nietzsche What have they to do with Balzano Lotze Brentano Meinong Husserl and Twardowski Even tually Phenomenology was chosen misdescribing more than half of the course That illustrates the problems one faces in trying to work against the picture of the period which is ingrained in minds and syllabuses This book arises from my efforts to combat that picture I backed into writing about the history of recent philosophy rather than setting out to do so The beginning was chance In Manchester in the early seventies at a time when most English philosophy departments breathed re cycled Oxford air the intellectual atmosphere derived from Cambridge and Warsaw spiced with a breath of Freiburg and Paris

Chemistry & Atomic Structure John David Main Smith, 1924 *Advances in Intelligent Process-Aware Information Systems* Gregor Grambow, Roy Oberhauser, Manfred Reichert, 2017-05-22 This book provides a state of the art perspective on intelligent process aware information systems and presents chapters on specific facets and approaches applicable to such systems Further it highlights novel advances and developments in various aspects of intelligent process aware information systems and business process management systems Intelligence capabilities are increasingly being integrated into or created in many of today s software products and services Process aware information systems provide critical computing infrastructure to support the various processes involved in the creation and delivery of business products and services Yet the integration of intelligence capabilities into process aware information systems is a non trivial yet necessary evolution of these complex systems The book s individual chapters address adaptive process management case management processes autonomically capable processes process oriented information logistics process recommendations reasoning over process models process portability and business process intelligence The primary target groups are researchers and PhD Master students in the field of information systems

Essays on Realist Instance

Ontology and its Logic Donald W. Mertz, 2013-04-30 Structure or system is a ubiquitous and uneliminable feature of all our experience and theory and requires an ontological analysis The essays collected in this volume provide an account of structure founded upon the proper analysis of polyadic relations as the irreducible and defining elements of structure It is argued that polyadic relations are ontic predicates in the insightful sense of intension determined agent combinatorics monadic properties being the limiting and historically misleading case This assay of ontic predicates has a number of powerful explanatory implications including fundamentally providing ontology with a principium individuationis demonstrating the perennial theory that properties and relations are individuated as unit attributes or instances giving content to the ontology of facts or states of affairs and providing a means to precisely differentiate identity from indiscernibility The differentiation of the unrepeatability and repeatable intension aspects of ontic predicates makes it possible to properly diagnose and disarm the classic Bradley Regress Argument aimed against attributes and universals an argument that trades on confusing these aspects It is argued that these two aspects of ontic predicates form a composite simple an explanation that sheds light on the nature and necessity of the medieval formal distinction e g the distinctio formalis a parte rei of Scotus Following from this analysis of ontic predication there is given a number of principles delineating realist instance ontology together with a critique of both nominalistic trope theory and modern revivals of Aristotle's instance ontology of the Categories It is shown how the resulting theory of facts can via horizontal and vertical composition account for all the hierarchical structuring of our experience and theory and importantly how this can rest upon an atomic ontic level composed of only dependent ontic predicates The latter is a desideratum for the proposed Structural Realism ontology for micro physics where at its lowest level the physical is said to be totally relational structural Nullified is the classic and insidious assumption that dependent entities presuppose a class of independent substrata or substances and with this any pressure to admit bare particulars and intensionless relations or ties The logic inherent in realist instance ontology termed PPL is formalized in detail and given a consistency proof Demonstrated is the logic's power to distinguish legitimate from illegitimate impredicative definitions and in this how it provides a general solution to the classic self-referential paradoxes PPL corresponds to Gödel's programmatic Theory of Concepts The last essay not previously published provides a detailed differentiation of identity from indiscernibility preliminary to which is given an explanation of in what sense a predicate logic presupposes an ontology of predication The principles needed for the differentiation have the significant implication e g for the foundations of mathematics of implying an infinity of logical entities viz instances of the identity relation
