theory and practice of psychotherapy This alternative practice is one of the exciting frontiers of therapy and will enrich the work of therapists medical practitioners and bodyworkers Body and mind are functionally inseparable The cultural separation of body and mind however has confused our thinking and created obstacles for psychological health This separation is itself firmly planted in the practices of standard psychotherapy In the first part of the book Aposhyan discusses this false division and goes on to articulate the theoretical basis for the unity of body and mind Drawing on research in neuroscience and developmental conceptions of human attachment bodily processes including nonverbal attunement processing and regulation are shown to be basic to what transpires in therapy This account culminates in a chapter on the links between biology and consciousness that are critical for therapeutic that addresses the whole person Part 2 provides an overview of the basic form of BMP Beginning with the tasks of therapy the chapters in this part describe the format of therapy in terms of a cycle of interaction between body and mind concluding with a consideration of the primary goal of BMP i e a synchronization of body and mind founded in body awareness The therapy professional is also offered methods to cultivate his or her own embodiment For the psychotherapist personal embodiment is the single most important key to integrating the body into psychotherapy practice The body systems are reviewed in Part 3 Aposhyan takes the reader on a detailed tour of various important systems including the muscular skeletal and nervous systems as well as the skin fluids viscera and endocrine systems The result is an articulate picture of an integrated set of body functions all of which have their distinct roles and yet communicate with and have a bearing upon the functioning of each other The specific techniques of BMP are grounded in this detailed picture of the various body systems In Part 4 Aposhyan instructs readers in how to anchor in the body the change affected by BMP Discussions here consider change at the cellular level and address specific clinical issues critical to BMP Body Mind Psychotherapy offers a simple user friendly and safe approach to integrating the body into therapy and psychological exploration The techniques involved are consistent with research from neuroscience psychological development and traumatology As a result the reader will find BMP both an effective and research based therapeutic approach

Index Medicus ,1909 PSYCHOTHERAPY HUGO MÜNSTERBERG,1909 This volume on psychotherapy belongs to a series of books which I am writing to discuss for a wider public the practical applications of modern psychology The first book called On the Witness Stand studied the relations of scientific psychology to crime and the law courts This new book deals with the relations of psychology to medicine Others discussing its relations to education to social problems to commerce and industry will follow soon For popular treatment I divide applied psychology into such various separated books because they naturally address very different audiences That which interests the lawyer does not concern the physician and again the school teacher has his own sphere of interests Moreover the different subjects demand a different treatment The problems of psychology and law were almost entirely neglected I was anxious to draw wide attention to this promising field and therefore I chose the form of loose popular essays without any aim towards systematic presentation of the subject As to

psychology and medicine almost the opposite situation prevails There is perhaps too much talk afloat about psychotherapy the widest circles cultivate the discussion the magazines Pg viii overflow with it The duty of the scientific psychologist is accordingly not to stir up interest in this topic but to help in bringing this interest from mere gossip vague mysticism and medical amateurishness to a clear understanding of principles What is needed in this time of faith cures of a hundred types is to deal with the whole circle of problems in a serious systematic way and to emphasize the aspect of scientific psychological theory Hence the whole first part of this book is an abstract discussion and its first chapters have not even any direct relation to disease I am convinced that both physicians and ministers and all who are in practical contact with these important questions ought to be brought to such painstaking and perhaps fatiguing inquiry into principles before the facts are reached To those who seek a discussion of life facts alone the whole first part will of course appear to be a tedious way around they may turn directly to the second and third parts One word for my personal right to deal with these questions as too much illegitimate psychotherapeutics is heard to day For me the relation between psychology and medicine is not a chance chapter of my science to which I have turned simply in following up the various sides of applied psychology And still less have I turned to it because it has become the fashion in recent years On the contrary it has been an important factor in all my work since my student days I have been through five years of regular medical studies three years in Leipzig and two years Pg ix in Heidelberg I have an M D degree from the University of Heidelberg In my first year as docent in a German university twenty years ago I gave throughout the winter semester before several hundred students a course in hypnotism and its medical application It was probably the first university course on hypnotism given anywhere Since that time I have never ceased to work psychotherapeutically in the psychological laboratory Yet that must not be misunderstood I have no clinic and while by principle I have never hypnotized anyone for mere experiment s sake but always only for medical purposes yet I adjust my practical work entirely to the interests of my scientific study The limitations of my time force me to refuse the psychotherapeutic treatment of any case which has not a certain scientific interest for me and of the many hundreds whom I have helped in the laboratory no one ever had to pay anything Thus my practical work has strictly the character of laboratory research The chief aim of this book is twofold It is a negative one I want to counteract the misunderstandings which overflow the whole field especially by the careless mixing of mental and moral influence And a positive one I want to strengthen the public feeling that the time has come when every physician should systematically study psychology the normal in the college years and the abnormal in the medical school This demand of medical education cannot be postponed any longer The aim of the book is not to fight the Emmanuel Church Movement or Pg x even Christian Science or any other psychotherapeutic tendency outside of the field of scientific medicine I see the element of truth in all of them but they ought to be symptoms of transition Scientific medicine should take hold of psychotherapeutics now or a most deplorable disorganization will set in the symptoms of which no one ought to overlook to day
