Children's Reading and Mathematics Achievement in Kindergarten and First Grade

Children's Reading Comprehension and Assessment Scott G. Paris, Steven A. Stahl, 2005-03-23 The volume identifies critical issues and cutting edge research in assessing children's reading comprehension

[Children's Reading and Mathematics Achievement in Kindergarten and First Grade](#) Kristin Denton, Kristin Denton Flanagan, Jerry West, 2002 This report is the third in a series based on findings about young children's early experiences with school from the Early Childhood Longitudinal Study Kindergarten Class of 1998-99 ECLS K Sponsored by the U S Department of Education National Center for Education Statistics the ECLS K study selected a nationally representative sample of kindergartners in the fall of 1998 and is following these children through the spring of their fifth grade year The study collects information directly from the children their families teachers and schools This report looks at children's school performance during first grade in terms of their reading and mathematical knowledge and skills by relating them to child family and school characteristics The report finds that some of the differences in children's reading and mathematics knowledge and skills by child family and school characteristics that are present as they enter kindergarten persist into the spring of their kindergarten and spring of their first grade year For example poor children consistently score below the national average in both reading and mathematics across the kindergarten year and into the spring of first grade These findings also suggest differences that are beginning to emerge by children's sex By spring of first grade females are more likely to be reading understanding words in context whereas males are more likely to be proficient at advanced mathematics multiplication and division However some differences do seem to wane For example in both reading and mathematics Hispanic children's scores tend to move upward toward the national mean over these two school years The longitudinal nature of the ECLS K will enable researchers to track these differences in terms of children's third and fifth grade reading and mathematics performance The report also notes that children who bring certain knowledge and skills with them to kindergarten are likely to be at an advantage in classroom learning compared to peers who do not possess such resources The descriptive analyses of the report show that children who have specific cognitive knowledge and skills are read to frequently possess positive approaches to learning and enjoy very good or excellent general health perform better in reading and mathematics than those without these resources Includes data and standard error tables Appended is a table of regression coefficients for the relationship between children's resources and skills to their spring kindergarten and spring first grade reading performance Contains 18 references HTH

Children as Readers in Children's Literature Evelyn Arizpe, Vivienne Smith, 2015-10-05 We are fascinated by text and we are fascinated by reading Is this because we are in a time of textual change Given that young people always seem to be in the vanguard of technological change questions about what and how they read are the subject of intense debate *Children as Readers in Children's Literature* explores these questions by looking at the literature that is written for children and young people to see what it tells us about them as readers The contributors to this book are a

group of distinguished children's literature scholars, literacy and media specialists who contemplate the multiple images of children as readers and how they reflect the power and purpose of texts and literacy. Contributors to this wide-ranging text consider how books shape the readers we become; cognitive and affective responses to representation of books and reading; the relationship between love stories and reading as a cultural activity; reading as protection and enlightenment; picturebooks as stage sets for acts of reading; readers' perceptions of a writer. This portrayal of books and reading also reveals adults' beliefs about childhood and literacy and how they are changing. It is a theme of crucial significance in the shaping of future generations of readers given these beliefs influence not only ideas about the teaching of literature but also about the role of digital technologies. This text is a must-read for any individual interested in the importance of keeping literature alive through reading.

Children's Reading and Spelling Terezinha Nunes, Peter Bryant, 2009-02-09. This book extends models of early literacy, analyzing how children's reading and spelling skills develop throughout their school career. An account of how a child's reading and spelling develop, which goes beyond the early years. Shows that there are radical changes in the way children read and spell as they get older. Describes a new theory about the learning that goes on in the later stages of reading and spelling. Makes clear the educational implications of this theory. The authors' research has previously contributed to the literacy hour, a government initiative to improve the teaching of literacy skills in UK schools.

Educational Research Bulletins, 1930. *Educational Tests for Use in Elementary Schools* Charles Watters Odell, University of Illinois (Urbana-Champaign campus). Bureau of Educational Research, Walter Scott Monroe, Marion Eugene Herriott, Thomas Tristram Hamilton, Max Dissette Engelhart, 1929. *Children Reading and Writing* Judith A. Langer, 1986. This volume presents the results of a two-year research project which examined the development and use of reading and writing by school-aged children. The studies examined the relationships between children's reading and writing by looking at the social contexts that surrounded their understandings and uses of reading and writing, the cognitive processes that the readers and writers invoked in completing different kinds of tasks and the products that were produced, including the ideas that were developed in reading and writing and the ways in which these ideas were structured in presentation or recall. The results point to new understandings about children's context for literacy and ways in which children at distinctly different phases of their schooling experiences approach reading and writing. The author contrasts ways in which children at each of the differing ages approach their reading and writing tasks, illuminating the knowledge they already have and what they have yet to learn.
