**Handbook of Clinical Behavior Therapy with the Elderly Client** Patricia A. Wisocki, 2013-11-21 Although we speak of the elderly as if there were one body of people with common characteristics older adults are more heterogeneous than any other population People over the age of 65 are also the fastest growing segment of the population in the United States currently numbering 25 million The majority of older adults reside in their communities a small fraction of them are cared for in institutions Most may expect to experience some kind of physical impairment Approximately a quarter of the population may expect to suffer a mental health impairment While traditional therapies have not been especially effective for older adults behavior therapy has shown exceptional promise as a treatment modality This

book presents a comprehensive explication of the relatively new field of behavioral gerontology. It was written for the clinician interested in the interaction of medical, environmental, and psychological variables and their effects on treatment of elderly clients and for the researcher who will be looking to extend knowledge about interventions with this population. It will be useful for the graduate student in clinical psychology as well as the experienced clinician who will want to include the elderly in his or her therapeutic population.

**Clinical Behavior Therapy with Children** Thomas H. Ollendick, Jerome A. Cerny, 2013-03-08

As noted by its title, the focus of this book is centered on an examination of behavior therapy with children in clinical settings. Throughout our goal has been to examine theoretical underpinnings, review empirical research, and illustrate clinical utility for a variety of behavioral procedures with children. In pursuing this goal, we have described child behavior therapy as an approach based on empirical methodology derived from behavioral principles and focused upon adjustment disorders of children. The hallmark of such an approach is its accountability; the extent to which the procedures and techniques presented in this text are demonstrably accountable must be determined at least partially by the reader. As students of child behavior, we have become sensitized to two trends in behavior therapy with children during the preparation of this book. First, we have been concerned with the simple application of behavioral procedures to children irrespective of developmental considerations. All too frequently, assessment strategies and treatment procedures found to be useful with adults have been applied to children in an indiscriminate fashion. For example, some recent studies have examined and assessed the very same social skill deficits in children as in adults, e.g., lack of eye contact, delayed latency of response, and absence of positive commendatory responses. Surely, skill deficits differ from age to age, just as they differ from situation to situation.

**Handbook of Clinical Behavior Therapy with Adults** Alan S. Bellack, Michel Hersen, 2012-03-17

Despite the occasional outcries to the contrary, the field of behavior therapy is still growing, and the asymptote has not been reached yet. The umbrella of behavior therapy continues to enlarge and still is able to encompass new theories, new concepts, new research, new data, and new clinical techniques. Although the number of new behavioral journals now has stabilized, we still see a proliferation of books on the subject. In the past few years, however, we have seen considerable specialization within behavior therapy. No longer is it possible to be a generalist and remain fully abreast of all the relevant developments. Thus, we see behavior therapists who deal with adults, those who deal with children, those whose specialty is hospital psychiatry, and those who see themselves as practitioners of behavioral medicine. Even within a subarea such as behavioral medicine, specialization runs supreme to the extent that there are experts in the specific addictions, adult medical problems, and child medical problems. Given the extent of specialization, there are numerous ways to skin the proverbial cat. We therefore have chosen to look at the contemporary work in behavior therapy that is being carried out with adults, in part of course because of our long-standing interest in this area as teachers, researchers, and clinicians. In so doing, we have chosen to highlight the clinical aspects of the endeavor but not at the expense of the rich research heritage for each of the specific adult disorders.
