Beginning Java 8 Language Features Kishori Sharan, 2014-08-18

Beginning Java 8 Language Features covers essential and advanced features of the Java programming language such as the new lambda expressions, closures, inner classes, threads, I/O, Collections, garbage collection, streams, and more. Author Kishori Sharan provides over 60 diagrams and 290 complete programs to help you visualize and better understand the topics covered in this book. The book starts with a series of chapters on the essential language features provided by Java, including annotations, inner classes, reflection, and generics. These topics are then complemented by details of how to use lambda expressions, allowing you to build powerful and efficient Java programs. The chapter on threads follows this up and discusses everything from the very basic concepts of a thread to the most advanced topics such as synchronizers, the fork/join framework, and atomic variables. This book contains unmatched coverage of Java I/O, including NIO 2.0, the Path API, the FileVisitor API, the watch service, and asynchronous file I/O. With this in-depth knowledge, your data and file management programs will be able to take advantage of every feature of Java's powerful I/O framework. Finally, you will learn how to use the Stream API, a new exciting addition to Java 8, to perform aggregate operations on collections of data elements using functional style programming. You will examine the details of stream processing, such as creating streams from different data sources, learning the difference between sequential and parallel streams, applying the filter, map, reduce pattern, and dealing with optional values.

Java I/O Elliott Rusty Harold, 2006-05-16

All of Java's Input/Output (I/O) facilities are based on streams, which provide simple ways to read and write data of different types. Java provides many different kinds of streams, each with its own application. The universe of streams is divided into four large categories: input streams and output streams for reading and writing binary data, and readers and writers for reading and writing textual character data. You're almost certainly familiar with the basic kinds of streams, but did you know that there's a `CipherInputStream` for reading encrypted data, and a `ZipOutputStream` for automatically compressing data? Do you know how to use buffered streams effectively to

make your I O operations more efficient Java I O 2nd Edition has been updated for Java 5 0 APIs and tells you all you ever need to know about streams and probably more A discussion of I O wouldn t be complete without treatment of character sets and formatting Java supports the Unicode standard which provides definitions for the character sets of most written languages Consequently Java is the first programming language that lets you do I O in virtually any language Java also provides a sophisticated model for formatting textual and numeric data Java I O 2nd Edition shows you how to control number formatting use characters aside from the standard but outdated ASCII character set and get a head start on writing truly multilingual software Java I O 2nd Edition includes Coverage of all I O classes and related classes In depth coverage of Java s number formatting facilities and its support for international character sets **Absolute Java** Walter; Mock Savitch (Kenrick),2013 [LEARN JDBC THE HARD WAY: A Hands-On Reference to MySQL and SQL Server Driven Programming](#) Vivian Siahaan,Rismon Hasiholan Sianipar,2019-11-23 This hands on tutorial reference guide to MySQL and SQL Server is not only perfect for students and beginners but it also works for experienced developers who aren t getting the most from MySQL and SQL Server As you would expect this book shows how to build from scratch two different databases MySQL and SQL Server using Java In designing a GUI and as an IDE you will make use of the NetBeans tool In the first chapter you will learn How to install NetBeans JDK 11 and MySQL Connector J How to integrate external libraries into projects How the basic MySQL commands are used How to query statements to create databases create tables fill tables and manipulate table contents is done In the second chapter you will study Creating the initial three table projects in the school database Teacher table TClass table and Subject table Creating database configuration files Creating a Java GUI for viewing and navigating the contents of each table Creating a Java GUI for inserting and editing tables and Creating a Java GUI to join and query the three tables In the third chapter you will learn Creating the main form to connect all forms Creating a project will add three more tables to the school database the Student table the Parent table and Tuition table Creating a Java GUI to view and navigate the contents of each table Creating a Java GUI for editing inserting and deleting records in each table Creating a Java GUI to join and query the three tables and all six In chapter four you will study how to query the six tables In chapter five you will be taught how to create Crime database and its tables In chapter six you will be taught how to extract image features utilizing BufferedImage class in Java GUI In chapter seven you will be taught to create Java GUI to view edit insert and delete Suspect table data This table has eleven columns suspect_id primary key suspect_name birth_date case_date report_date suspect_status arrest_date mother_name address telephone and photo In chapter eight you will be taught to create Java GUI to view edit insert and delete Feature_Extraction table data This table has eight columns feature_id primary key suspect_id foreign key feature1 feature2 feature3 feature4 feature5 and feature6 In chapter nine you will add two tables Police_Station and Investigator These two tables will later be joined to Suspect table through another table File_Case which will be built in the seventh chapter The Police_Station has six columns police_station_id primary key location city province
