**Growth and Defect Structures** H. C. Freyhardt, 2012-12-06 Polytypic crystals of semiconductors dielectrics and magnetic materials attract an increasing attention in science and technology On one hand the phenomenon of polytypism is one of the fundamental problems of solid state physics its solution would make it possible to elucidate the problem of the interconnection of different structures and intraatomic forces acting in crystals On the other hand the polytypic difference in crystals is most strongly expressed in electro physical properties which makes their application promising mainly in semiconductor electronics Thus the difficulties of producing modulated structures in polytypic crystals can be overcome since these crystals form a class of one dimensional natural superlattices At present it has become clear that polytypism in crystals and compounds is the rule rather than an exception and it is determined by the conditions of their synthesis This phenomenon seems to be rather widespread in nature and fundamental for crystal formation H polytypism was recently thought to be but a specific structural feature of a few substances such as SiC ZnS CdI etc by now this phenomenon has been discovered in 2 v an increasing range of crystalline substances for example in silicon diamond IIIIB VI AIIB AIBVII compounds in ternary semiconducting compounds metals

silicates perovskites mica organic crystals The more accurately the structural studies are performed the greater is the number of crystals of various substances found to exhibit the phenomenon of polytypism Recently excellent surveys have systematized our knowledge of polytypism Liquid Crystalline Functional Assemblies and Their Supramolecular Structures Takashi Kato,2008-03-31 This book presents critical reviews of the present position and future trends in modern chemical research concerned with chemical structure and bonding It contains short and concise reports each written by the world's renowned experts Still valid and useful after 5 or 10 years more information as well as the electronic version of the whole content is available at [springerlink.com](http://springerlink.com) *The Next Generation in Membrane Protein Structure Determination* Isabel Moraes,2016-08-23 This book reviews current techniques used in membrane protein structural biology with a strong focus on practical issues The study of membrane protein structures not only provides a basic understanding of life at the molecular level but also helps in the rational and targeted design of new drugs with reduced side effects Today about 60% of the commercially available drugs target membrane proteins and it is estimated that nearly 30% of proteins encoded in the human genome are membrane proteins In recent years much effort has been put towards innovative developments to overcome the numerous obstacles associated with the structure determination of membrane proteins This book reviews a variety of recent techniques that are essential to any modern researcher in the field of membrane protein structural biology The topics that are discussed are not commonly found in textbooks The scope of this book includes Expression screening using fluorescent proteins The use of detergents in membrane protein research The use of NMR Synchrotron developments in membrane protein structural biology Visualisation and X ray data collection of microcrystals X ray diffraction data analysis from multiple crystals Serial millisecond crystallography Serial femtosecond crystallography Membrane protein structures in drug discovery The information provided in this book should be of interest to anyone working in the area of structural biology Students will find carefully prepared overviews of basic ideas and advanced protein scientists will find the level of detail required to apply the material directly to their day to day work Chapters 4 5 6 8 and 9 of this book are published open access under a CC BY 4.0 license at [link.springer.com](http://link.springer.com) **The Tissues and their structure** Alexander S.
