Tools include material flow analysis, life cycle assessment, and economics. Interwoven into this is the role of human behavior and its influence on technical industrial ecology solutions, in particular why it is critical to consider from an engineering and science context. Project based and community based learning are also included as an opportunity to provide experiential learning applying industrial ecology concepts and tools. The book also includes a dedicated chapter on Emerging and Developing Economies which introduces readers to the idea of different trajectories of development and the role of industrial ecology in shaping these developments. Using the tools covered earlier in the textbook, the book includes five case study chapters which focus on food, energy, water, climate change, and carbon capture and utilization. The book contains chapter questions and discussion points to aid student learning. This textbook is essential reading for introducing those studying environmental and sustainable engineering to industrial ecology
