Broadband Powerline Communications Halid Hrasnica, Abdelfatteh Haidine, Ralf Lehnert, 2005-01-14 Broadband Powerline Communications Network Design covers the applications of broadband PLC systems in low voltage supply networks, a promising candidate for the realization of cost-effective solutions for last-mile communications networks. There are many activities surrounding the development and application of PLC technology in the access area, particularly because of the strong interest of new network providers after the deregulation of the telecommunications market. Nowadays, there are no existing standards for broadband PLC networks which use a frequency range up to 30 MHz. This book includes relevant and timely information regarding broadband PLC systems and especially PLC access networks and contributions to the design aspects of broadband PLC access systems and their network components. This book offers explanations on how broadband PLC networks are realized, what the important characteristics for the transmission on electrical power grids are, and which implementation solutions have been recently considered for the realization of broadband PLC systems. Considers various system realizations, disturbance scenarios, and their impact on the transmission in PLC networks, electro-magnetic compatibility, applied modulation schemes, coding, and error handling methods. Pays particular attention to the specifics of the PLC MAC layer and its protocols, as well as the modelling and performance evaluation of broadband PLC networks.

Programmable Logic Controllers And Industrial Automation An Introduction Madhuchhanda Mitra, 2005 **Introduction to Robotics in CIM Systems** James A. Rehg, 2003 Written from a manufacturing perspective, this book takes readers step by step through the theory and application techniques of designing and building a robot-driven automated work cell, from selection of hardware through programming of the devices to economic justification of the project. All-inclusive in approach, it covers not only robot automation but all the other technology needed in the automated work cell to integrate the robot with the work environment and with the enterprise data base. Robot and other required automation hardware and software are introduced in the order in which they would be selected in an actual industrial automation design. Includes system troubleshooting guides, case studies, problems, and worked example problems. Robot Classification, Automated Work Cells, and CIM Systems, End of Arm Tooling, Automation Sensors, Work Cell Support Systems, Robot and System Integration, Work Cell Programming, Justification and Applications of Work Cells, Safety, Human Interface, Operator Training, Acceptance, and Problems.
