University of Northern Colorado, 1925 Child Development Thomas J. Berndt, 1997 **Behavior Analysis of Child Development** Sidney Bijou, 1993-05-01 First published in 1961 Sidney Bijou's Behavior Analysis of Child Development is a seminal work in the field of child development. Intended for the student with a limited background in psychology who is embarking on a study of child development, the book offers a concise introduction to the natural scientific approach to child psychology. It defines basic behavioral terms and principles and includes many examples of the application of these principles to the understanding of children. In addition to its contribution to the field of child development, this book offers an easily readable and understandable account of the greater topic of behavior analysis itself. Readers may apply the overview presented here to other topics in wider study: human behavioral development and learning.

Reprint and Circular Series of the National Research Council National Research Council (U.S.), 1930 **The Development of Children's Number Ideas in the Primary Grades** William Arthur Brownell, 1928 This monograph reports an experimental study of the development of children's number ideas in the primary grades. The children who were study subjects have all had at least two months of school training; it was not possible therefore to deal with the earliest beginnings of number knowledge such as number names or the earliest forms of skill in the use of numbers such as the ability to count. This study attempted to isolate the factors involved in the ability to apprehend visual concrete numbers and to measure the influence of these factors in the development of that ability. The goal of this study is to develop a coherent description of the learning processes exhibited in acquiring primary arithmetic and to develop principles for teaching primary number which are consistent with this description of the learning process.
