Managing Cybersecurity in the Process Industries CCPS (Center for Chemical Process Safety), 2022-04-19 The chemical process industry is a rich target for cyber attackers who are intent on causing harm Current risk management techniques are based on the premise that events are initiated by a single failure and the succeeding sequence of events is predictable A cyberattack on the Safety Controls Alarms and Interlocks SCAI undermines this basic assumption Each facility should have a Cybersecurity Policy Implementation Plan and Threat Response Plan in place The response plan should address how to bring the process to a safe state when controls and safety systems are compromised The emergency response plan should be updated to reflect different actions that may be appropriate in a sabotage situation IT professionals even those working at chemical facilities are primarily focused on the risk to business systems This book contains guidelines for companies on how to improve their process safety performance by applying Risk Based Process Safety RBPS concepts and techniques to the problem of cybersecurity

Lean for the Process Industries Peter L. King, 2019-06-05 Compared to its widespread implementation across almost all areas of production Lean improvement efforts lag within the process industries While many innovators have successfully applied Lean principles to these industries during the past three decades most of those pioneering efforts were never recorded to guide the improvement efforts of others Drawing on more than 40 years of application experience at one of the world s largest chemical and materials manufacturers coupled with 10 years in private

practice Peter King corrects this void by providing the first comprehensive resource written explicitly for change agents within the process industries Focusing on areas where the improvement needs of the process industry differ from parts assembly manufacturing Lean for the Process Industries Dealing with Complexity Second Edition Covers each of the eight wastes commonly described in Lean literature looking at how they manifest themselves in process operations Explains how to adapt value stream mapping for process operations Shows how to identify the root causes of bottlenecks and how to manage them to optimize flow until they can be eliminated Provides practical techniques to overcome the barriers which have prevented the application of Cellular Manufacturing to process operations Discusses the role of business leadership in a Lean strategy describing both enabling and counter productive management behaviors Since the publication of the first edition of this book Peter King has been busy consulting with food beverage gasoline additive and nutraceutical companies these new experiences have broadened his perspectives on certain Lean processes and have given him a richer set of examples to discuss in this new edition While Value Stream Mapping is a very powerful tool to understand flow bottlenecks and waste in an operation the traditional format as presented in many other books does not describe all of the data required to fully understand process flow and its detractors This new edition highlights the necessary additions with examples of why they are useful Product wheel scheduling achieves production leveling in a far more comprehensive and effective way than traditional heijunka methods This edition has a more thorough description of the wheel concept and design steps and more examples from actual applications
