## Early Maths:

**The Building Blocks of Early Maths** Elaine Bennett, Jenny Weidner, 2014-04-16 Young children need to develop and understand the core basic concepts in mathematics before they can move forward in their mathematical learning Without these solid foundations they are more likely to have gaps in their knowledge and require intervention in their primary years This new book provides guidance and resources to help you develop children's key skills and understanding in mathematics Written by experienced teachers the book outlines key mathematical concepts and provides a wide range of exciting mathematically rich activities that support the development of these concepts It exposes some of the common misconceptions and errors that practitioners may observe children showing in their settings and offers simple practical strategies to help move children forward in their thinking and understanding Covering all areas of mathematics learning counting and number calculation shape and space pattern measuring and handling data the book features practical ideas for supporting assessment observation mathematical vocabulary and building links with home activities that promote a child led approach linked to children's everyday lives and experiences guidance on how to extend and challenge children's learning through adult led quality teaching and effective practice a clear sense of progression based on children's understanding rather than age Written by experienced practitioners *The Building Blocks of Early Maths* will help you to ensure that the children in your care have the strong foundations they need to become confident successful mathematician in the future

*Developing Early Maths Through Story* Marion Leeper, 2019-12-17 Stories and rhymes put maths into context and demonstrate concepts in ways meaningful to children They make maths more relevant fun and accessible to children sparking their imagination while developing their mathematical thinking *Developing Early Maths through Story* is the new guide to help practitioners feel more confident about teaching early mathematics Ideal for use with 3 5 years old the book will encourage young learners to exercise mathematical concepts both outdoors and indoors and show practitioners how to help their children and develop their skills creatively The book contains 14 chapters on numbers 0 to 13 each including A brief outline of a traditional story EYFS Learning objectives Resources needed Suggestions for younger children and babies Scope for outdoor activities and for using natural materials Further activities games and extension questions Suggestions for using ICT Assessment opportunities Ideal for parents and carers who want to explore or extend the learning of maths at home with their children in a very accessible and enjoyable way

**Mathematics and Transition to School** Bob Perry, Amy MacDonald, Ann Gervasoni, 2015-01-09 This edited book brings together for the first time an international collection of work focused on two important aspects of any young child's life learning mathematics and starting primary or elementary school The chapters take a variety of perspectives and integrate these two components in sometimes explicit and sometimes more subtle ways The key issues and themes explored in this book are the mathematical and other strengths that all participants in the transition to school bring to this period of a child's life the opportunities provided by transition to school for young children's

mathematics learning the importance of partnerships among adults and among adults and children for effective school transitions and mathematics learning and teaching the critical impact of expectations on their mathematics learning as children start school the importance of providing children with meaningful challenging and relevant mathematical experiences throughout transition to school the entitlement of children and educators to experience assessment and instructional pedagogies that match the strengths of the learners and the teachers the importance for the aspirations of children families communities educators and educational organisations to be recognised as legitimate and key determinants of actions experiences and successes in both transition to school and mathematics learning and the belief that young children are powerful mathematics learners who can demonstrate this power as they start school In each chapter authors reflect on their work in the area of mathematics and transition to school place that work within the overall context of research in these fields predict the trajectory of this work in the future and consider the implications of the work both theoretically and practically

Developing Young Children's Mathematical Learning Outdoors Lynda Keith, 2017-08-23 Developing Young Children's Mathematical Learning Outdoors provides detailed guidance and practical advice on planning mathematical experiences for young children outdoors By examining the key features of a mathematically rich outdoor environment it illustrates how this can motivate children in leading their own learning and mathematical thinking Drawing upon the author's wealth of experience the book provides support for students and early years practitioners in developing a deeper understanding of how to plan quality experiences which combine pedagogy with effective practice Covering all aspects of mathematics it identifies meaningful contexts and shows how adults can use open ended questions and prompts to promote children's mathematical play outside With rich case studies and reflective questions included throughout as well as suggestions for useful resources to put the ideas in the book into practice it is essential reading for all those that want to develop curious and creative mathematical thinkers in the early years

**Teaching and Learning to Unlock Social Mobility for Every Child** Sonia Blandford, Stefan Burkey, 2023-04-10 **Teaching and Learning to Unlock Social Mobility for Every Child** is a topical and insightful text that guides readers through evidence based practice that will improve outcomes for all involved in education increasing social mobility and inclusion in every sense In the past 30 years how children and young people learn has changed considerably as challenges of social mobility become more apparent Cultural and social economic disadvantage is evident as is the need to focus on mutuality in education whereby all children and young people are valued regardless of their background challenges or needs In this context **Teaching and Learning to Unlock Social Mobility for Every Child** is the first work to capture and clearly explain practical teaching and learning approaches that can be used in any school It circles around the creativity and technology of pedagogy exploring an educational agenda that is genuinely rooted in social mobility for all children Written accessibly and full of case studies this book is intended to guide practitioners and stakeholders at all levels of education from school leaders to researchers students and teachers It will help them to

impart the skills and capacities which children and young people require to drive their future social mobility and address the challenges they will face on their own terms *Thinking and Learning About Mathematics in the Early Years* Linda Pound, 2008-03-20 An exploration of children's mathematical development to show how you can encourage and enhance the numeracy skills of any child in the early years by linking maths to every day life and making it a playful and enjoyable cross curricular activity Motor Skills and Their Foundational Role for Perceptual, Social, and Cognitive Development Klaus Libertus, Petra Hauf, 2017-05-18 Motor skills are a vital part of healthy development and are featured prominently both in physical examinations and in parents baby diaries It has been known for a long time that motor development is critical for children's understanding of the physical and social world Learning occurs through dynamic interactions and exchanges with the physical and the social world and consequently movements of eyes and head arms and legs and the entire body are a critical during learning At birth we start with relatively poorly developed motor skills but soon gain eye and head control learn to reach grasp sit and eventually to crawl and walk on our own The opportunities arising from each of these motor milestones are profound and open new and exciting possibilities for exploration and interactions and learning Consequently several theoretical accounts of child development suggest that growth in cognitive social and perceptual domains are influenced by infants own motor experiences Recently empirical studies have started to unravel the direct impact that motor skills may have on other domains of development This volume is part of this renewed interest and includes reviews of previous findings and recent empirical evidence for associations between the motor domain and other domains from leading researchers in the field of child development We hope that these articles will stimulate further research on this interesting question **Learning and Teaching Early Math** Douglas H. Clements, Julie Sarama, 2014-05-23 In this important book for pre and in service teachers early math experts Douglas Clements and Julie Sarama show how learning trajectories help diagnose a child's level of mathematical understanding and provide guidance for teaching By focusing on the inherent delight and curiosity behind young children's mathematical reasoning learning trajectories ultimately make teaching more joyous They help teachers understand the varying levels of knowledge exhibited by individual students which in turn allows them to better meet the learning needs of all children Using straightforward no nonsense language this book summarizes the current research about how children learn mathematics and how to build on what children already know to realize more effective teaching This second edition of *Learning and Teaching Early Math* remains the definitive research based resource to help teachers understand the learning trajectories of early mathematics and become quintessential professionals Updates to the new edition include Explicit connections between Learning Trajectories and the new Common Core State Standards New coverage of patterns and patterning Incorporation of hundreds of recent research studies Early Maths Cynthia G. Dawes, 1977-01-01 Covers the development of mathematical experience in children from 3 to 5 Children can be given scope to find out about sets numbers sizes and shapes and they can begin to measure size weight capacity and time in an informal

fashion     **Mathematics Learning in Early Childhood** National Research Council, Division of Behavioral and Social Sciences and Education, Center for Education, Committee on Early Childhood Mathematics, 2009-11-13 Early childhood mathematics is vitally important for young children's present and future educational success. Research demonstrates that virtually all young children have the capability to learn and become competent in mathematics. Furthermore, young children enjoy their early informal experiences with mathematics. Unfortunately, many children's potential in mathematics is not fully realized, especially those children who are economically disadvantaged. This is due in part to a lack of opportunities to learn mathematics in early childhood settings or through everyday experiences in the home and in their communities. Improvements in early childhood mathematics education can provide young children with the foundation for school success. Relying on a comprehensive review of the research, *Mathematics Learning in Early Childhood* lays out the critical areas that should be the focus of young children's early mathematics education, explores the extent to which they are currently being incorporated in early childhood settings, and identifies the changes needed to improve the quality of mathematics experiences for young children. This book serves as a call to action to improve the state of early childhood mathematics. It will be especially useful for policy makers and practitioners who work directly with children and their families in shaping the policies that affect the education of young children.

**Supporting Early Mathematical Development** Caroline McGrath, 2010-07-12 *Supporting Early Mathematical Development* is an essential text for current Early Years practitioners and students, offering an excellent blend of theory and practice that will enable you to provide successful mathematical education for children from birth to eight years old. Charting the delivery of mathematical development in Playgroups, Children's Centres, Nurseries, and Primary Schools, it forges links between current practice and fundamental Early Years principles and makes suggestions for creating effective pedagogies in maths teaching. Promoting mathematical development through play-based learning, this book presents a wealth of practical, multi-sensory teaching strategies, instructional methodologies, activity ideas incorporating play, books, songs, cookery, and the outdoors, examples of children's work, advice on translating theory into practice, questions for reflective practice. Throughout the book, Caroline McGrath breaks down the complexity of teaching and learning mathematics into simple steps and guides readers through possible gaps in their knowledge, bringing fresh enthusiasm to teaching mathematics. This is an invaluable resource for practitioners and trainee teachers wishing to strengthen their mathematical teaching and professional practice, or for students on a wide range of Early Years courses.
