## **Basic Methods Of Cryptography:**

**Basic Methods of Cryptography** Jan C. A. Lubbe, 1998-03-12 This text covers the fundamentals of cryptography which is concerned with methods of security in the storage and transmission of information. Computers are now found in every layer of society and information is being communicated and processed automatically on a large scale. Examples include medical and financial files, automatic banking, video phones, pay tv, facsimiles, tele shopping, and global computer networks. In all these cases there is a growing need for the protection of information to safeguard economic interests, to prevent fraud, and to ensure privacy. In this book the fundamentals of secure storage and transportation of information are described. Among other things, attention is given to symmetric DES and asymmetric RSA cryptographic algorithms which are suitable for data security, to methods for authentication, data integrity, and digital signatures, key management, and to network aspects. The book will be of value to advanced students and researchers involved in data protection and information processing, including electrical engineers, mathematicians, business managers, system designers, application programmers, information analysts, and security officers.

**Handbook of Communications Security** F. Garzia, 2013 Communications represent a strategic sector for privacy protection and for personal, company, national, and international security. The interception, damage, or loss of information during communication can generate material and non-material economic damages from both a personal and collective point of view. The purpose of this book is to give the reader information relating to all aspects of communications security, beginning at the base ideas and building to reach the most advanced and updated concepts. The book will be of interest to integrated system designers, telecommunication designers, system engineers, system analysts, security managers, technicians, intelligence personnel, security personnel, police, army, private investigators, scientists, graduate and postgraduate students, and anyone that needs to communicate in a secure way.
