**Improved Power-on, Base Drag Methodology for the Aeroprediction Code** Frankie Gale Moore, Thomas C. Hymer, 2001 Improved methods for base pressure prediction under base bleed and rocket motor on conditions have been developed The base bleed method makes several refinements to the method developed by Danberg at the Army Research Laboratory in Aberdeen Maryland The improved rocket motor on base pressure prediction improves upon the method developed at the Army Missile Command in Huntsville Alabama by Brazzel and some of his colleagues The major refinement to the base bleed method of Danberg was to estimate the power off value of base pressure empirically based on an extensive data base as opposed to using computational fluid dynamics codes to predict this term The major modifications to the power on base pressure prediction method of Brazzel was to extend its range of applicability to high values of thrust coefficient to Mach numbers less than 1.5 and to different afterbody shapes In comparing the improved methods for power on base drag prediction to experiment it was seen that both methods gave reasonable agreement to most experimental data bases However more validation is needed particularly for the combined effects of angle of attack fins and power on conditions
