*Alloy and Microstructural Design* John K. Tien, George S. Ansell, 1976      [Alloy and microstructural design](#) John K. Tien, 1976      **Alloy And Microstructural Design** John Tien, 2012-12-02 Alloy and Microstructural Design serves as a guide in translating theory into design and practice and provides text for an applications courses in physical and mechanical metallurgy Coverage of the book includes a short history and introduction to metals and alloys high strength nonferrous alloys and methods in strengthening metals for commercial use and high temperatures The text also discusses the composite strengthening the properties of composites creep and stress rupture resistance and other factors related to them fracture toughness and mechanical equations of state The book also covers the resistance of metals and alloys against fatigue aqueous stress and hot corrosion as well as in oxidation and hydrogen embrittlement The monograph is recommended for practicing engineers in the field of metallurgy who need an easily understood guide with concise text and tables of handy information The book will also serve as a good learning material for engineering undergraduates who are studying the strength of materials      *Metallurgy and Design of Alloys with Hierarchical Microstructures* Krishnan K. Sankaran, Rajiv S. Mishra, 2017-06-14 Metallurgy and Design of Alloys with Hierarchical Microstructures covers the fundamentals of processing microstructure property relationships and how multiple properties are balanced and optimized in materials with hierarchical microstructures widely used in critical applications The discussion is based principally on metallic materials used in aircraft structures however because they have sufficiently diverse microstructures the underlying principles can easily be extended to other materials systems With the increasing microstructural complexity of structural materials it is important for students academic researchers and practicing engineers to possess the knowledge of how materials are optimized and how they will behave in service The book integrates aspects of computational materials science physical metallurgy alloy design process design and structure properties relationships in a manner not done before It fills a knowledge gap in the interrelationships of multiple microstructural and deformation mechanisms by applying the concepts and tools of designing microstructures for achieving combinations of engineering properties such as strength corrosion resistance durability and damage tolerance in multi component materials used for critical structural applications Discusses the science behind the properties and performance of advanced metallic materials Provides for the efficient design of materials and processes to satisfy targeted performance in materials and structures Enables the selection and development of new alloys for specific applications based upon evaluation of their microstructure as illustrated in this work      [Nano and Microstructural Design of Advanced Materials](#) M. A. Meyers, M Sarikaya, R. O. Ritchie, 2003-12-05 The importance of the nanoscale effects has been recognized in materials research for over fifty years but it is only recently that advanced characterization and fabrication methods are enabling scientists to build structures atom by atom or molecule by molecule The understanding and control of the nanostructure has been to a large extent made possible by new atomistic analysis and characterization methods pioneered by

transmission electron microscopy Nano and Microstructural Design of Advanced Materials focuses on the effective use of such advanced analysis and characterization techniques in the design of materials Teaches effective use of advanced analysis and characterization methods at an atomistic level Contains many supporting examples of materials in which such design concepts have been successfully applied **Magnesium Technology 2020** J. Brian Jordon,Victoria Miller,Vineet V. Joshi,Neale R. Neelameggham,2020-01-22 The Magnesium Technology Symposium the event on which this collection is based is one of the largest yearly gatherings of magnesium specialists in the world Papers represent all aspects of the field ranging from primary production to applications to recycling Moreover papers explore everything from basic research findings to industrialization Magnesium Technology 2020 covers a broad spectrum of current topics including alloys and their properties cast products and processing wrought products and processing forming joining and machining corrosion and surface finishing and structural applications In addition there is coverage of new and emerging applications

**Microstructural Design and Development of Path A Prime-Candidate Alloy** ,1980 This work summarizes the results of microstructural design and alloy development in the Path A Prime Candidate Alloy PCA The basis for the microstructural design basically is the well established MC helium trapping mechanism and its correlation with improved swelling and embrittlement resistance in HFIR irradiated 316 Ti A range of preirradiation microstructures were designed with variable combinations of matrix and grain boundary precipitation prior to actual investigation of the PCA
