An Introduction To Identification:

An Introduction to Identification J. P. Norton, 2009-01-01 Suitable for advanced undergraduates and graduate students this text covers the theoretical basis for mathematical modeling as well as a variety of identification algorithms and their applications 1986 edition

An Introduction to Identification J. P. Norton, 1986 **An Introduction to Identification** J. P. Norton, 1986 This book gives a global picture of the current state of identification from the reasons for mathematical modelling through the theoretical underpinning to details of a wide range of well tried identification algorithms and their application The limitations of present techniques and the practical constraints on their use are explored and illustrated by numerical examples Introductions to areas of current research are included in a chapter on specialised topics

An Introduction to Identification Problems via Functional Analysis Alfredo Lorenzi, 2014-07-24 this monograph is based on two courses in computational mathematics and operative research which were given by the author in recent years to doctorate and PhD students The text focuses on an aspect of the theory of inverse problems which is usually referred to as identification of parameters numbers vectors matrices functions appearing in differential or integrodifferential equations The parameters of such equations are either quite unknown or partially unknown however knowledge about these is usually essential as they describe the intrinsic properties of the material or substance under consideration

System Identification Karel J. Keesman, 2011-05-16 System Identification shows the student reader how to approach the system identification problem in a systematic fashion The process is divided into three basic steps experimental design and data collection model structure selection and parameter estimation and model validation each of which is the subject of one or more parts of the text Following an introduction on system theory particularly in relation to model representation and model properties the book contains four parts covering data based identification non parametric methods for use when prior system knowledge is very limited time invariant identification for systems with constant parameters time varying systems identification primarily with recursive estimation techniques and model validation methods A fifth part composed of appendices covers the various aspects of the underlying mathematics needed to begin using the text The book uses essentially semi physical or gray box modeling methods although data based transfer function system descriptions are also introduced The approach is problem based rather than rigorously mathematical The use of finite input output data is demonstrated for frequency and time domain identification in static dynamic linear nonlinear time invariant and time varying systems Simple examples are used to show readers how to perform and emulate the identification steps involved in various control design methods with more complex illustrations derived from real physical chemical and biological applications being used to demonstrate the practical applicability of the methods described End of chapter exercises for which a downloadable instructors Solutions Manual is available from fill in URL here will both help students to assimilate what they have learned and make the book suitable for self tuition by practitioners looking to brush up on modern techniques Graduate and final

year undergraduate students will find this text to be a practical and realistic course in system identification that can be used for assessing the processes of a variety of engineering disciplines System Identification will help academic instructors teaching control related to give their students a good understanding of identification methods that can be used in the real world without the encumbrance of undue mathematical detail

An Introduction to Spectroscopic Methods for the Identification of Organic Compounds F. Scheinmann, 2013-10-22 An Introduction to Spectroscopic Methods for the Identification of Organic Compounds Volume 2 covers the theoretical aspects and some applications of certain spectroscopic methods for organic compound identification This book is composed of 10 chapters and begins with an introduction to the structure determination from mass spectra The subsequent chapter presents some mass spectrometry seminar problems and answers This presentation is followed by discussions on the problems concerning the application of UV spectroscopy and electron spin resonance spectroscopy Other chapters deal with some advances and development in NMR spectroscopy and the elucidation of structural formula of organic compounds by a combination of spectral methods The final chapter surveys seminar problems and answers in the identification of organic compounds using NMR IR UV and mass spectroscopy This book will prove useful to organic and analytical chemists

Identification of Dynamic Systems Rolf Isermann, Marco Münchhof, 2010-11-22 Precise dynamic models of processes are required for many applications ranging from control engineering to the natural sciences and economics Frequently such precise models cannot be derived using theoretical considerations alone Therefore they must be determined experimentally This book treats the determination of dynamic models based on measurements taken at the process which is known as system identification or process identification Both offline and online methods are presented i e methods that post process the measured data as well as methods that provide models during the measurement The book is theory oriented and application oriented and most methods covered have been used successfully in practical applications for many different processes Illustrative examples in this book with real measured data range from hydraulic and electric actuators up to combustion engines Real experimental data is also provided on the Springer webpage allowing readers to gather their first experience with the methods presented in this book Among others the book covers the following subjects determination of the non parametric frequency response fast Fourier transform correlation analysis parameter estimation with a focus on the method of Least Squares and modifications identification of time variant processes identification in closed loop identification of continuous time processes and subspace methods Some methods for nonlinear system identification are also considered such as the Extended Kalman filter and neural networks The different methods are compared by using a real three mass oscillator process a model of a drive train For many identification methods hints for the practical implementation and application are provided The book is intended to meet the needs of students and practicing engineers working in research and development design and manufacturing

Block-oriented Nonlinear System

Identification Fouad Giri,Er-Wei Bai,2010-08-18 Block oriented Nonlinear System Identification deals with an area of research that has been very active since the turn of the millennium The book makes a pedagogical and cohesive presentation of the methods developed in that time These include iterative and over parameterization techniques stochastic and frequency approaches support vector machine subspace and separable least squares methods blind identification method bounded error method and decoupling inputs approach The identification methods are presented by authors who have either invented them or contributed significantly to their development All the important issues e g input design persistent excitation and consistency analysis are discussed The practical relevance of block oriented models is illustrated through biomedical physiological system modelling The book will be of major interest to all those who are concerned with nonlinear system identification whatever their activity areas This is particularly the case for educators in electrical mechanical chemical and biomedical engineering and for practising engineers in process aeronautic aerospace robotics and vehicles control Block oriented Nonlinear System Identification serves as a reference for active researchers new comers industrial and education practitioners and graduate students alike

INTRODUCTION TO THE STUDY OF THE MAYA HIEROGLYPHS SYLAVANUS GRISWOLD MORLEY,1915 Identification of Microorganisms by Mass Spectrometry Charles L. Wilkins,Jackson O. Lay,2005-12-02 A multidisciplinary approach to understanding the fundamentals of mass spectrometry for bacterial analysis From chemotaxonomy to characterization of targeted proteins Identification of Microorganisms by Mass Spectrometry provides an overview of both well established and cutting edge mass spectrometry techniques for identifying microorganisms A vital tool for microbiologists health professionals and analytical chemists the text is designed to help scientists select the most effective techniques for use in biomedical biochemical pharmaceutical and bioterror defense applications Since microbiological applications of mass spectrometry require a basic understanding of both microbiology and analytical chemistry the editors have incorporated material from both disciplines so that readers from either field will come to understand the necessary principles of the other Featuring contributions from some of the most recognized experts in both fields this volume provides specific examples of fundamental methods as well as approaches developed in the last decade including Metastable atom bombardment pyrolysis
