Analysis And Geometry In Several Complex Variables:

Analysis and Geometry in Several Complex Variables Gen Komatsu, Masatake Kuranishi, 2012-12-06 This volume consists of a collection of articles for the proceedings of the 40th Taniguchi Symposium Analysis and Geometry in Several Complex Variables held in Katata Japan on June 23-28 1997 Since the inhomogeneous Cauchy Riemann equation was introduced in the study of Complex Analysis of Several Variables there has been strong interaction between Complex Analysis and Real Analysis in particular the theory of Partial Differential Equations Problems in Complex Analysis stimulate the development of the PDE theory which subsequently can be applied to Complex Analysis This interaction involves Differential Geometry for instance via the CR structure modeled on the induced structure on the boundary of a complex manifold Such structures are naturally related to the PDE theory Differential Geometric formalisms are efficiently used in settling problems in Complex Analysis and the results enrich the theory of Differential Geometry This volume focuses on the most recent developments in this interaction including links with other fields such as Algebraic Geometry and Theoretical Physics Written by participants in the Symposium this volume treats various aspects of CR geometry and the Bergman kernel projection together with other major subjects in modern Complex Analysis We hope that this volume will serve as a resource for all who are interested in the new trends in this area We would like to express our gratitude to the Taniguchi Foundation for generous financial support and hospitality We would also like to thank Professor Kiyosi Ito who coordinated the organization of the symposium

Several Complex Variables with Connections to Algebraic Geometry and Lie Groups Joseph L. Taylor, 2002 This text presents an integrated development of core material from several complex variables and complex algebraic geometry leading to proofs of Serre's celebrated GAGA theorems relating the two subjects and including applications to the representation theory of complex semisimple Lie groups It includes a thorough treatment of the local theory using the tools of commutative algebra an extensive development of sheaf theory and the theory of coherent analytic and algebraic sheaves proofs of the main vanishing theorems for these categories of sheaves and a complete proof of the finite dimensionality of the

cohomology of coherent sheaves on compact varieties The vanishing theorems have a wide variety of applications and these are covered in detail Of particular interest are the last three chapters which are devoted to applications of the preceding material to the study of the structure theory and representation theory of complex semisimple Lie groups Included are introductions to harmonic analysis the Peter Weyl theorem Lie theory and the structure of Lie algebras semisimple Lie algebras and their representations algebraic groups and the structure of complex semisimple Lie groups All of this culminates in Milicic's proof of the Borel Weil Bott theorem which makes extensive use of the material developed earlier in the text There are numerous examples and exercises in each chapter This modern treatment of a classic point of view would be an excellent text for a graduate course on several complex variables as well as a useful reference for the expert

Silva, 1995-09-27 Based on a conference held in Trento Italy and sponsored by the Centro Internazionale per la Ricerca Matematica this work presents advances in several complex variables and related topics such as transcendental algebraic geometry infinite dimensional supermanifolds and foliations It covers the unfoldings of singularities Levi foliations Cauchy Reimann manifolds infinite dimensional supermanifolds conformal structures algebraic groups instantons and more **Several Complex Variables and the Geometry of Real Hypersurfaces** John P. D'Angelo, 2019-07-16 **Several Complex Variables and the Geometry of Real Hypersurfaces** covers a wide range of information from basic facts about holomorphic functions of several complex variables through deep results such as subelliptic estimates for the Neumann problem on pseudoconvex domains with a real analytic boundary The book focuses on describing the geometry of a real hypersurface in a complex vector space by understanding its relationship with ambient complex analytic varieties You will learn how to decide whether a real hypersurface contains complex varieties how closely such varieties can contact the hypersurface and why it's important The book concludes with two sets of problems routine problems and difficult problems many of which are unsolved Principal prerequisites for using this book include a thorough understanding of advanced calculus and standard knowledge of complex analysis in one variable **Several Complex Variables and the Geometry of Real Hypersurfaces** will be a useful text for advanced graduate students and professionals working in complex analysis Function Theory of Several Complex Variables Steven George Krantz, 2001 Emphasizing integral formulas the geometric theory of pseudoconvexity estimates partial differential equations approximation theory inner functions invariant metrics and mapping theory this title is intended for the student with a background in real and complex variable theory harmonic analysis and differential equations Several Complex Variables IV Semen G. Gindikin, Gennadij M. Khenkin, 2012-12-06 This volume of the EMS contains four survey articles on analytic spaces They are excellent introductions to each respective area Starting from basic principles in several complex variables each article stretches out to current trends in research Graduate students and researchers will find a useful addition in the extensive bibliography at the end of each article **Geometric Analysis of Several Complex Variables and Related**

Topics Y. Barkatou, 2011 This volume contains the proceedings of the Workshop on Geometric Analysis of Several Complex Variables and Related Topics which was held from May 10-14, 2010 in Marrakesh, Morocco. The articles in this volume present current research and future trends in the theory of several complex variables and PDE. Of note are two survey articles: the first presenting recent results on the solvability of complex vector fields with critical points, while the second concerns the Lie group structure of the automorphism groups of CR manifolds. The other articles feature original research in major topics of analysis, dealing with analytic and Gevrey regularity, existence of distributional traces, the bar partial Neumann operator, automorphisms of hypersurfaces, holomorphic vector bundles, spaces of harmonic forms, and Gysin sequences. **Several**

Complex Variables KOHN, LU, REMMERT, SIU, 2012-12-06 In recent years there has been increasing interaction among various branches of mathematics. This is especially evident in the theory of several complex variables, where fruitful interplays of the methods of algebraic geometry, differential geometry, and partial differential equations have led to unexpected insights and new directions of research. In China, there has been a long tradition of study in complex analysis, differential geometry, and differential equations as interrelated subjects, due to the influence of Professors S. S. Chern and L. K. Hua. After a long period of isolation, in recent years there is a resurgence of scientific activity and a resumption of scientific exchange with other countries. The Hangzhou conference is the first international conference in several complex variables held in China. It offered a good opportunity for mathematicians from China, U.S., Germany, Japan, Canada, and France to meet and to discuss their work. The papers presented in the conference encompass all major aspects of several complex variables, in particular in such areas as complex differential geometry, integral representation, boundary behavior of holomorphic functions, invariant metrics, holomorphic vector bundles, and pseudoconvexity. Most of the participants wrote up their talks for these proceedings. Some of the papers are surveys, and the others present original results. This volume constitutes an overview of the current trends of research in several complex variables. *Several Complex Variables VII* H.

Grauert, Thomas; Peternell, R. Remmert, 2013-03-09 Of making many books, there is no end, and much study is a weariness of the flesh. Eccl. 12:12. In the beginning, Riemann created the surfaces. The periods of integrals of abelian differentials on a compact surface of genus g immediately attach a g -dimensional complex torus to X . If $g \geq 2$, the moduli space of X depends on $3g-3$ complex parameters. Thus, problems in one complex variable lead from the very beginning to studies in several complex variables. Complex tori and moduli spaces are complex manifolds, i.e., Hausdorff spaces with local complex coordinates. Z^1 holomorphic functions are locally those functions which are holomorphic in these coordinates. In the second half of the 19th century, classical algebraic geometry was born in Italy. The objects are sets of common zeros of polynomials. Such sets are of finite dimension but may have singularities forming a closed subset of lower dimension, outside of the singular locus, these zero sets are complex manifolds. *Several Complex Variables V* G.M. Khenkin, 2012-12-06 In this part, we present a survey of mean periodicity phenomena which arise in connection with classical questions in complex analysis, partial differential

equations and more generally convolution equations A common feature of the problem we shall consider is the fact that their solutions depend on techniques and ideas from complex analysis One finds in this way a remarkable and fruitful interplay between mean periodicity and complex analysis This is exactly what this part will try to explore It is probably appropriate to stress the classical flavor of all of our treatment Even though we shall frequently refer to recent results and the latest theories such as algebraic analysis or the theory of Bernstein-Sato polynomials it is important to observe that the roots of probably all the problems we discuss here are classical in spirit since that is the approach we use For instance most of Chapter 2 is devoted to far-reaching generalizations of a result dating back to Euler and it is soon discovered that the key tool for such generalizations was first introduced by Jacobi As the reader will soon discover similar arguments can be made for each of the subsequent chapters Before we give a complete description of our work on a chapter-by-chapter basis let us make a remark about the list of references It is quite hard, maybe even impossible to provide a complete list of references on such a vast topic

Tasty Bits of Several Complex Variables Jiri Lebl, 2016-05-05 This book is a polished version of my course notes for Math 6283 Several Complex Variables given in Spring 2014 and Spring 2016 semester at Oklahoma State University The course covers basics of holomorphic function theory, CR geometry, the $\bar{\partial}$ -problem, integral kernels and basic theory of complex analytic subvarieties See <http://www.jirka.org/scv> for more information

Introduction to Complex Analysis Boris Vladimirovich Shabat, 1992-11-04 Since the 1960s there has been a flowering in higher-dimensional complex analysis Both classical and new results in this area have found numerous applications in analysis, differential and algebraic geometry and in particular contemporary mathematical physics In many areas of modern mathematics the mastery of the foundations of higher-dimensional complex analysis has become necessary for any specialist Intended as a first study of higher-dimensional complex analysis this book covers the theory of holomorphic functions of several complex variables, holomorphic mappings and submanifolds of complex Euclidean space

Geometric Analysis of PDE and Several Complex Variables Francois Trèves, Sagun Chanillo, 2005 This volume is dedicated to Francois Trèves who made substantial contributions to the geometric side of the theory of partial differential equations (PDEs) and several complex variables One of his best-known contributions reflected in many of the articles here is the study of hypo-analytic structures An international group of well-known mathematicians contributed to the volume Articles generally reflect the interaction of geometry and analysis that is typical of Trèves's work such as the study of the special types of partial differential equations that arise in conjunction with CR manifolds, symplectic geometry or special families of vector fields There are many topics in analysis and PDEs covered here unified by their connections to geometry The material is suitable for graduate students and research mathematicians interested in geometric analysis of PDEs and several complex variables

Several Complex Variables IV Semen Gindikin, Gennadij M. Khenkin, 1989-12-12 This volume of the EMS contains four survey articles on analytic spaces They are excellent introductions to each respective area Starting from basic principles in several complex variables each article

stretches out to current trends in research Graduate students and researchers will find a useful addition in the extensive bibliography at the end of each article

Complex Geometric Analysis in Pohang Kang-Tae Kim, Steven George Krantz, 1999 This volume comprises the proceedings of a conference on the geometric analysis of several complex variables held at POSTECH in June 1997 The conference was attended by scientists and students from around the globe Each of the five plenary speakers at the conference gave a short course on a topic of current interest in the field The lecture write ups contain cogent and accessible information intended for a broad audience The volume also includes a tutorial in several complex variables given by Kim and Krantz at the conference This tutorial is geared toward helping the novice to understand the rest of the material in the book The bibliographies of the papers give students and young mathematicians a valuable resource for future learning on the topic This book provides a substantial overview on areas of current activity Required background for understanding the text is a solid undergraduate education in mathematics and familiarity with first year graduate studies in real and complex analysis Some exposure to geometry would be helpful The book is also suitable for use as a supplemental course text

Introduction to Complex Analysis E.M. Chirka, A.G. Vitushkin, P. Dolbeault, G.M. Khenkin, 1989-12-12 From the reviews In sum the volume under review is the first quarter of an important work that surveys an active branch of modern mathematics Some of the individual articles are reminiscent in style of the early volumes of the first *Ergebnisse* series and will probably prove to be equally useful as a reference for the appropriate reader they will be valuable sources of information about modern complex analysis *Bulletin of the Am Math Society* 1991 This remarkable book has a helpfully informal style abundant motivation outlined proofs followed by precise references and an extensive bibliography it will be an invaluable reference and a companion to modern courses on several complex variables *ZAMP Zeitschrift f r Angewandte Mathematik und Physik* 1990
