Danger Calls:

Danger Calls Caridad Pineiro, Caridad Scordato, Loreth Anne White, 2005 **Cruising World** ,1984-07 **Hernarne**
William B. Felts, 1891 *The Moral Wager* Malcolm Murray, 2007-05-05 In the following chapters I offer an evolutionary
account of morality and from that extrapolate a version of contractarianism I call consent theory Game theory helps to
highlight the evolution of morality as a resolution of interpersonal conflicts under strategic negotiation It is this emphasis on
strategic negotiation that underwrites the idea of consent Consent theory differs from other contractarian models by
abandoning reliance on rational self interest in favour of evolutionary adaptation From this more emphasis will be placed on
consent as natural convergence rather than consent as an idealization My picture of contractarianism then ends up looking
more like the relativist model offered by Harman rather than the rational or pseudo rational model offered by Gauthier let
alone the Kantian brands of Rawls or Scanlon So at least some of my discussion will dwell on why it is no loss to abandon
hope for the universal categorical morality that rational models promise In the introduction I offer the betting analogy that
underwrites the remaining picture There are some bets where the expected utility is positive though the odds of winning on
this particular occasion are exceedingly low In such cases we cannot hope to give an argument that taking the bet is rational
The only thing we can say is that those predisposed to take this kind of bet on these kinds of occasions will do better than
those with other dispositions so long as such games occur often enough Adam's Tongue Derek Bickerton, 2009-03-17 One
of the world's leading researchers into the evolution of language argues that the acquisition of words changed the structure
of early human's brains which set into motion the limitless creativity that allowed people to make the world that exists today

Chasing Doctor Dolittle Con Slobodchikoff, 2012-11-27 Slobodchikoff's ground breaking research Jonathan Balcombe
shows us that animals have much to teach us about language Groundbreaking research has been done teaching animals
human language but what about the other way around Studies have shown that lizards squid monkeys and birds are talking
to each other communicating information about food predators squabbles and petty jealousies These animal languages are
unique and highly adaptive By exploring them we come to appreciate the basis of our own languages understanding or even
speaking them allows us to get closer to the other species who inhabit this planet with us The implications of animals having
language are enormous It has been one of the last bastions separating us from them Slobodchikoff's studies of the
communication system of prairie dogs over twenty five years have attracted a considerable amount of attention from the
media including a one hour documentary on his work produced by BBC and Animal Planet In *Chasing Doctor Dolittle* he
posits that the difference is one of degree not the vast intellectual chasm that philosophers have talked about for millennia
Filled with meticulous research vivid examples and daring conclusions this book will challenge the reader's assumptions and
