Dangerous Touch:

One Hand Clapping Nikolay Kukushkin, 2025-10-23 Brilliant bold and beautifully articulated Karl J Friston Professor of Neuroscience University College London Neuroscientist Nikolay Kukushkin reveals the miracle by which consciousness evolved out of the natural world from the birth of the cell to the majesty of our modern minds Science says that you are nothing but a chemical reaction a collection of atoms and molecules like rocks paperclips and everything else in the physical universe But if that s so where is the place in this world for your consciousness In a word why does it feel so special to be you Like the Zen Buddhist riddle pondering the imponderable the sound of a single hand clapping this book asks the seemingly unanswerable question of how the human mind came to exist within the material world In search of an answer neuroscientist Nikolay Kukushkin takes readers on a billion year journey through time from the roots of our existence to the advent of Homo sapiens reimagining the story of our evolution The result is an exhilarating book that embeds our consciousness within a single unified story of life on Earth A work of ambitious intellectual scope One Hand Clapping is distinguished as much by its originality as by the breadth of its imaginative reach drawing from neuroscience evolution philosophy and a rich tapestry of cultural references all brought to life by the author s own illustrations Told with the drama and daring of a mythical epic it reaches deep into our oceanic past to show for the first time how the entire course of Earth s history from the earliest non living particles ultimately led to the formation of our own minds

Electrotechnology in Mining N. Marinovic, 2012-12-02 Both mining and electrical engineers need to bear in mind the following specific requirements of electrical applications in mining 1 Economy of electrical plant and equipment in relation to the cost price of the extracted mineral ores governed by the specific exploitation conditions 2 Reliability of electrical plant and equipment for extractive operations operational efficiency and plant and personnel safety 3 Special safeguards to counteract the additional hazards posed by the use of electric power and by electrical phenomena in general The book has been written along these lines dealing with those topics which highlight the aspects of electrical engineering of relevance for mining engineers and aspects of mining operations that electrical engineers need to meet the above mentioned basic requirements governing the introduction and use of electrical plants and systems in mines This book is intended as a text book and will be of use to students and colleges as well as to mining and electrical engineers

The Lightning Rod as a Danger Jan Meppelink, 2023-07-15 This book investigates the physical effects of a lightning flash on a person near the down conductor of a lightning protection system These effects are the touch voltage the step voltage and the side flash For this purpose a full scale simulation model of the human body with a resistance of 1000 ohms was first created In the simulation model the body can touch the down conductor or be placed close to it Furthermore the specific resistance of the earth is varied Likewise insulating layers such as asphalt can be incorporated into the simulation model Also special cases like water permeable layers or water layers on an asphalt layer can be calculated In post processing all relevant values can be determined such as the energy converted in the body the charge the current and

the voltage applied to the body A comparison with the permissible limit values then shows for the lightning protection classes whether there is danger or not and provides information on necessary measures There is a risk for death and injury if the down conductor is touched However there is also a risk of a side flash if a person is standing next to a discharge Site isolation with dry asphalt is effective but there is a residual risk of surface discharges In real situations with wet asphalt water permeable layers or asphalt with a water layer however there is a great risk of death or injury Equipotential bonding with an earthing grid is a necessary but not sufficient solution with regard to the induced voltage at negative subsequent stroke Therefore the situation must always be examined on a case by case basis with regard to the safety requirements The only effective measure to prevent injury and death due to touch voltage is an insulating down conductor in conjunction with equipotential bonding The measures for reducing the touch voltage such as site insulation and equipotential bonding basically also apply to limiting the step voltage A risk calculation according to IEC 62305 2 gives the mean time between two events of injury and death MG 1 RA The tolerable risk is RA 0 0001 or MT 10 000 years equivalent to one death in 10 000 years
