Advanced Lectures on General Relativity Geoffrey Compère, 2019-01-31 These lecture notes are intended for starting PhD students in theoretical physics who have a working knowledge of General Relativity The four topics covered are Surface charges as conserved quantities in theories of gravity Classical and holographic features of three dimensional Einstein gravity Asymptotically flat spacetimes in four dimensions BMS group and memory effects The Kerr black hole properties at extremality and quasi normal mode ringing Each topic starts with historical foundations and points to a few modern research directions

Advanced General Relativity Claude Barrabès, Peter A. Hogan, 2013-05-23 The book covers mainstream topics at research level involving gravitational waves spinning particles and black holes suitable for graduates and early postgraduates exploring avenues into research in general relativity

Introduction to Black Hole Astrophysics Gustavo E. Romero, Gabriela S. Vila, 2013-09-14 This book is based on the lecture notes of a one semester course on black hole astrophysics given by the author and is aimed at advanced undergraduate and graduate students with an interest in astrophysics The material included goes beyond that found in classic textbooks and presents details on astrophysical manifestations of black holes In particular jet physics and detailed accounts of objects like microquasars active galactic nuclei gamma ray bursts and ultra luminous X ray sources are covered as well as advanced topics like black holes in alternative theories of gravity The author avoids unnecessary technicalities and to some degree the book is self contained The reader will find some basic general relativity tools in Chapter 1 The appendices provide some additional mathematical details that will be useful for further study and a guide to the bibliography on the subject

General Relativity Steven Carlip,2019-01-17 Einstein s general theory of relativity currently our best theory of gravity is important not only to specialists but to a much wider group of physicists This short textbook on general relativity and gravitation offers students glimpses of the vast landscape of science connected to general relativity It incorporates some of the latest research in the field The book is aimed at readers with a broad range of interests in physics from cosmology to gravitational radiation to high energy physics to condensed matter theory The pedagogical approach is physics first readers move very quickly to the calculation of observational predictions and only return to the mathematical foundations after the physics is established In addition to the standard topics covered by most introductory textbooks it contains short introductions to more advanced topics for instance why field equations are second order how to treat gravitational energy and what is required for a Hamiltonian formulation of general relativity A concluding chapter discusses directions for further study from mathematical relativity to experimental tests to quantum gravity This is an introductory text but it has also been written as a jumping off point for readers who plan to study more specialized topics

Advanced General Relativity Claude Barrabès,Peter A. Hogan,2013-05-23 This book is aimed at students making the transition from a first course on general relativity to a specialized subfield It presents a variety of topics under the general

headings of gravitational waves in vacuo and in a cosmological setting equations of motion and black holes all having a clear physical relevance and a strong emphasis on space time geometry Each chapter could be used as a basis for an early postgraduate project for those who are exploring avenues into research in general relativity and who have already accumulated the required technical knowledge The presentation of each chapter is research monograph style rather than text book style in order to impress on interested students the need to present their research in a clear and concise format Students with advanced preparation in general relativity theory might find a treasure trove here **Supporting Research and Advanced Development**, 1969 **FUNDAMENTALS OF SPECIAL AND GENERAL RELATIVITY, REVISED EDITION**
