Crystallization Processes:

Crystallization Process Systems Alan G. Jones, 2002-04-04 Crystallization Process Systems gives a clear concise balanced and up to date presentation of crystallization and solid liquid separation of the crystalline product The information is presented in a coherent concise and logical sequence based on the fundamentals of particulate crystallization processes as systems By emphasising the analysis design and operation of particulate crystallization processes as systems the reader will be able to make a better judgement about the best cheapest and most effective production method to use Presents a coherent concise and logical sequence based on the fundamentals of particulate crystallization processes as systems Emphasis on the design and optimization of the crystallization processing system *Crystallization* Wolfgang Beckmann, 2013-04-01 Crystallization is a natural occurring process but also a process abundantly used in the industry Crystallization can occur from a solution from the melt or via deposition of material from the gas phase desublimation Crystals distinguish themselves from liquids gases and amorphous substances by the long range order of its building blocks that entail the crystals to be formed of well defined faces and give rise to a large number of properties of the solid Crystallization is used at some stage in nearly all process industries as a method of production purification or recovery of solid materials Crystallization is practiced on all scales from the isolation of the first milligrams of a newly synthesized substance in the research laboratory to isolating products on the multi million tonne scale in industry The book describes the breadth of crystallization operations from isolation from a reaction broth to purification and finally to tailoring product properties In the first section of the book the basic mechanisms nucleation growth attrition and agglomeration are introduced It ensures an understanding of supersaturation the driving force of crystallization Furthermore the solubility of the substance and its dependences on process conditions and the various techniques of crystallization and their possibilities and limitations are discussed Last but not least the first part includes an intensive treatment of polymorphism The second part builds on the basics exploring how crystallization processes can be developed either batch wise or continuous from solution or from the melt A discussion of the purification during crystallization serves as a link between the two sections where practical aspects and an insight using theoretical concepts are combined Mixing and its influence on the crystallization as well as the mutual interference of downstream processes with the crystallization are also treated Finally techniques to characterize the crop are discussed The third part of the book is dedicated to accounts of actual developments and of carried out crystallizations Typical pitfalls and strategies to avoid these as well as the design of robust processes are presented **16th European Symposium on Computer Aided Process Engineering and 9th International Symposium on Process Systems Engineering** W. Marquardt, C. Pantelides, 2006 This proceedings book brings together the leading innovations and achievements by leading professionals It acts as a forum for engineers scientists researchers managers and students from academia and industry to present and discuss progress being made in research and application of computer aided process engineering Dynamics
