of the Illinois the Missouri and the Mississippi Rivers lies the American Bottom a broad floodplain that prehistoric peoples
inhabited for millennia Precisely how did they live What were their ties to the natural world around them In this study based
upon some six years of intensive archeological and geological research at Labras Lake in St Clair County Illinois Richard W
Yerkes interprets a wealth of important new data in a stimulating and original fashion With a fine tuned control of the data
Yerkes challenges prevailing theories based on simple classifications of stone tools according to shape or on simple models of
diffuse and focal economies He views environment as a dynamic factor in economic and cultural life rather than as merely a
backdrop to it Using incident light microscopy he examines wear patterns on stone tools to determine what activities were
performed during each period the site was inhabited the Late Archaic the Late Woodland and the Mississippian As he
documents environmental change at Labras Lake he analyzes plant and animal remains in context to explore diet and
seasonal patterns of subsistence and settlement The result is a more accurate and detailed picture than ever before what
prehistoric life on the Mississippi floodplain was like Yerkes shows how to assess the duration and size of occupations and
how to determine where and when true permanent settlements arose What others call sedentary encampments he reveals as
sequences of small residential occupations for a narrow range of activities during shorter seasonal periods His contribution to
the study of the development of sedentism is potentially far reaching and will interest many North American anthropologists
