Rocket and Spacecraft Propulsion Martin J. L. Turner, 2008-11-05 The revised edition of this practical hands on book discusses the range of launch vehicles in use today throughout the world and includes the very latest details of some of the advanced propulsion systems currently being developed The author covers the fundamentals of the subject from the basic principles of rocket propulsion and vehicle dynamics through the theory and practice of liquid and solid propellant motors to new and future developments The revised edition will stick to the same principle of providing a serious exposition of the principles and practice of rocket propulsion but from the point of view of the user and enquirer who is not an engineering specialist Most chapters will remain substantially the same as the first edition they will be updated where necessary and errata corrected The main revisions will be to the chapter on electric propulsion where there have been significant new developments both in engine types and in practical applications This is now seen as the key to planetary exploration by robotic probes and should therefore be reflected Nuclear propulsion has emerged from the doldrums and is now seen as a definite possibility for outer solar system robotic exploration and as enabling technology for a human mars expedition A new chapter on nuclear thermal propulsion has been added to reflect this revival of interest

Quest for Space: The Indian Connect ,2014-02-15 Human endeavours in space over the past six decades have reached a stage that just about every facet of human life today has some complement of space capability contributing to it encompassing the entire spectrum from telecommunications navigation weather forecasting remote sensing broadcasting and disaster management Space exploration actually owes its origins to matters military with civil applications coming about as a by product Capability building in space thereafter has witnessed frenzied progress in the spheres of both the military and the civil commercial With an ever increasing number of countries joining the space bandwagon space is getting congested and competitive International legislation on space though well meaning is largely viewed to be inadequate to address the concerns of equitable access to space and more alarmingly is reticent on the issue of militarisation and weaponisation The Indian presence in the global space order is rather significant Ranking sixth globally in terms of space budget and technological capability India is capable of going beyond its calling Its multi dimensional space programme spans almost the entire spectrum from space launch to satellite construction and their employment in a large array of development centric applications and in recent years in missions beyond the Earth The Mangalyaan mission to Mars currently underway symbolises India s indigenous technological prowess and is a harbinger of its capability of cementing its status as a responsible space player at the global level India thus stands today technologically robust and self reliant well poised in the global space order to look beyond its domestic charter and address the concerns of the international global community Space legislation situational awareness and international cooperation in space security are some of the geostrategic options analysed in this book which could facilitate Indian positioning in the global space order

Reach for the Stars Gopal Raj,2000 Few space programmes anywhere in the world would have had such a modest beginning one van and a small fleet of precious bicycles used besides other things for ferrying parts of sounding rockets rockets that glean information on the upper atmosphere to the launch site And for use as an office and laboratory was the St Mary Magdalene Church at Thumba the small fishing village in Kerala where it all started What the programme lacked in facilities however was more than made up for by the dedication of the small band of people who worked there and their calibre Leading this team was Vikram Sarabhai one of the great visionaries of modern India A great motivator of people he was able to inspire his talented team to put India firmly on the path to space exploration Then and now the Indian Space Research Organization ISRO has continued to draw gifted people of the stature of Satish Dhawan Brahm Prakash A P J Abdul Kalam and U R Rao to list only a few **Reach for the Stars** The Evolution of India s Rocket Programme relates for the first time how India developed its satellite launch capability heartbreak and one rendered all the more difficult as most of the technology had to be developed indigenously ranging from the rocket engines themselves to precision guidance systems Today India is able to design and build its own Polar Satellite Launch Vehicles PSLV to launch remote sensing satellites used in weather forecasting resource mapping and crop yield estimates functions crucial to putting the country on the fast track to development In fact the Indian remote sensing satellites form the largest constellation of such satellites in space From sounding rockets to PSLVs has been a huge technological jump and in this dramatic and amazing story author Gopal Raj tells how the transition was made and the reasoning behind some of ISRO s most difficult choices in the course of thirty eight years It is specially apt that the book comes when the Indian rocket programme is poised at the edge of a new phase of growth when cryogenic technology will give India the capability to launch its own communication satellites story of a group of people who as with their gravity defying rockets could rise above their limitations to accomplish the impossible *45th Congress of the International Astronautical Federation* ,1994 **Design of Liquid Propellant Rocket Engines Second Edition** ,1971 New Quest ,1992-11 *IAF91-226 - IAF91-270* ,1988 Engineering Materials and Design ,1984 *Cryocoolers: Applications* Graham Walker,1983 **New Scientist** ,1969 India Today ,2001
