Broer, 2013-03-09 The 12 lectures presented in Representation Theories and Algebraic Geometry focus on the very rich and powerful interplay between algebraic geometry and the representation theories of various modern mathematical structures such as reductive groups quantum groups Hecke algebras restricted Lie algebras and their

companions This interplay has been extensively exploited during recent years resulting in great progress in these representation theories Conversely a great stimulus has been given to the development of such geometric theories as D modules perverse sheafs and equivariant intersection cohomology The range of topics covered is wide from equivariant Chow groups decomposition classes and Schubert varieties multiplicity free actions convolution algebras standard monomial theory and canonical bases to annihilators of quantum Verma modules modular representation theory of Lie algebras and combinatorics of representation categories of Harish Chandra modules

**Trends in Ring Theory** Vlastimil Dlab, László Márki, 1998 The Ring Theory Conference held at the University of Miskolc Hungary successfully accomplished its two goals to reflect contemporary trends in the subject area and to offer a meeting place for a large number of Eastern European algebraists and their colleagues from around the world Particular emphasis was placed on recent developments in the following four areas representation theory group algebras PI algebras and general ring theory

**Mathematical Reviews**, 2002 Algebraic Geometry Dan Abramovich, 2009 The 2005 AMS Summer Institute on Algebraic Geometry in Seattle was an enormous event With over 500 participants including many of the world s leading experts it was perhaps the largest conference on algebraic geometry ever held These two proceedings volumes present research and expository papers by some of the most outstanding speakers at the meeting vividly conveying the grandeur and vigor of the subject The most exciting topics in current algebraic geometry research receive very ample treatment For instance there is enlightening information on many of the latest technical tools from jet schemes and derived categories to algebraic stacks Numerous papers delve into the geometry of various moduli

spaces including those of stable curves stable maps coherent sheaves and abelian varieties Other papers discuss the recent dramatic advances in higher dimensional bi rational geometry while still others trace the influence of quantum field theory on algebraic geometry via mirror symmetry Gromov Witten invariants and symplectic geometry The proceedings of earlier algebraic geometry AMS Institutes held at Woods Hole Arcata Bowdoin and Santa Cruz have become classics The present volumes promise to be equally influential They present the state of the art in algebraic geometry in papers that will have broad interest and enduring value

**Representation Theory of Algebraic Groups and Quantum Groups** Toshiaki Shoji, 2004 A collection of research and survey papers written by speakers at the Mathematical Society of Japan s 10th International Conference This title presents an overview of developments in representation theory of algebraic groups and quantum groups It includes papers containing results concerning Lusztig s conjecture on cells in affine Weyl groups

*Algebraic Geometry*, 2004 *Potential Theory - Selected Topics* Hiroaki Aikawa, Mats Essen, 1996-09-13 The first part of these lecture notes is an introduction to potential theory to prepare the reader for later parts which can be used as the basis for a series of advanced lectures seminars on potential theory harmonic analysis Topics covered in the book include minimal thinness quasiadditivity of capacity applications of singular integrals to potential theory  $L^p$  capacity theory fine limits of the Nagel Stein boundary limit theorem and integrability of superharmonic functions The notes are written for an audience familiar with the theory of integration distributions and basic functional analysis

**St. Petersburg Mathematical Journal**, 2004 Invariants of Knots and 3-manifolds (Kyoto 2001) Tomotada Ohtsuki, 2002 *From Divergent Power Series to Analytic Functions* Werner Balser, 1994-08-29 Multisummability is a method which for certain formal power series with radius of convergence equal to zero produces an analytic function having the formal series as its asymptotic expansion This book presents the theory of multisummability and as an application contains a proof of the fact that all formal power series solutions of non linear meromorphic ODE are multisummable It will be of use to graduate students and researchers in mathematics and theoretical physics and especially to those who encounter formal power series to physical equations with rapidly but regularly growing coefficients
