Ex: If $f(x) = 2x + 5$, $g(x) = x^2 - 1$, $h(x) = 5x - 3$

Prove that, (i) $f \circ g(3) \neq g \circ f(3)$ ✓

(ii) $(f \circ g) \circ h = f \circ (g \circ h)$ ✓

$$(i) f \circ g(3) = f[g(3)] = f[3^2 - 1] = f(8) = 2(8) + 5 \\ = 21 \dots \textcircled{1}$$

$$g \circ f(3) = g[f(3)] = g[2(3) + 5] = g(11) = 11^2 - 1 = 120$$

from ① and ②, $g \circ f(3) \neq f \circ g(3)$... ②

A Logical Approach to Discrete Math David Gries, Fred B. Schneider, 2013-03-14 This text attempts to change the way we teach logic to beginning students Instead of teaching logic as a subject in isolation we regard it as a basic tool and show how to use it We strive to give students a skill in the propositional and predicate calculi and then to exercise that skill thoroughly in applications that arise in computer science and discrete mathematics We are not logicians but programming methodologists and this text reflects that perspective We are among the first generation of scientists who are more interested in using logic than in studying it With this text we hope to empower further generations of computer scientists and mathematicians to become serious users of logic Logic is the glue Logic is the glue that binds together methods of reasoning in all domains The traditional proof methods for example proof by assumption contradiction mutual implication and induction have their basis in formal logic Thus whether proofs are to be presented formally or informally a study of logic can provide understanding
