

Algorithm Bias: **Human** Biases in Disguise

Algorithm is a finite sequence of well-defined, computer-implementable instructions, typically to solve a class of problems or to perform a computation.

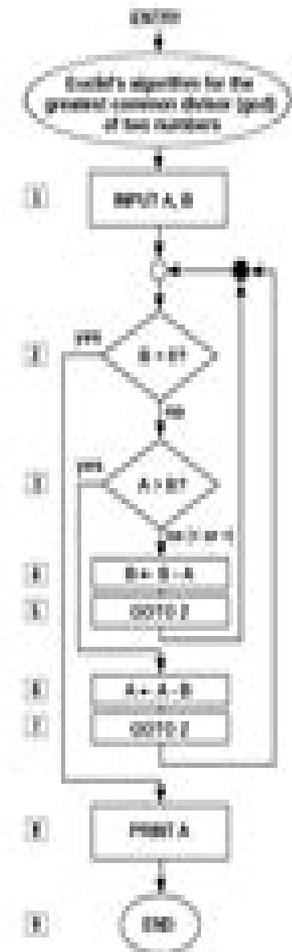

Everything seems to have artificial intelligence and machine learning built in according to those that market a product and those that have secretly been trading and collecting our data.

Experts and laypeople use terms and phrases with the same degree of confidence or 'knowledge'.

Some calculations are deemed 'protected' or 'secret' and are therefore not exportable.

Despite all the clever marketing, false assumptions and lack of knowledge, the concealed algorithms and the mathematics/analysis are predominately human biases not easily discernible.

Who accurate or transparent are the algorithms you come in contact with?
