Algorithmic Complexity And Telecommunication Problems:

    Algorithmic Complexity and Telecommunication Problems J-P Barthelmy,G. Cohen,A Lobstein,2020-08-14 In this treatment of algorithmic complexity the authors explore an area fundamental to the study of the foundations of computer science It is a topic which is at the interface of information theory applied mathematics and computer language theory and which is rooted strongly in this book in the problems of computer communication Complexity theory classifies problems according to the difficulty of resolving them while algorithms provide the computational method for solving those problems Therefore algorithmic complexity is concerned with establishing the best algorithm given the constraints of the computational environment and the degree of complexity The first three chapters present the context for a later in depth look at applied areas of the subject with an outline of classical complexity theory This is followed by three chapters which explore the key area of information communication Within this field the book is particularly concerned with two contiguous areas which make contrasting demands on the application of algorithmic complexity Cryptography demands the creation of extremely complex problems in order to achieve its goal of security whereas in coding for communication the emphasis is on maximizing the compact nature of the message and providing the error correction necessary for the message to achieve optimum speed The two must co exist and the methods outlined in Algorithmic Complexity suggest a number of approaches to such problems based on extensive examples of the authors experience This senior undergraduate book should be an essential read for those studying advanced topics in theoretical computer science and should provide an introduction to applied complexity for researchers and professionals alike   *Algorithmic complexity and communication problems* Jean-Pierre Barthélemy,Gérard Cohen,Antoine Lobstein,1996   **Open Problems in Communication and Computation** Thomas M. Cover,B. Gopinath,2012-12-06 Thomas M Cover and B Gopinatb The papers in this volume are the contributions to a special workshop on problems in communication and computation conducted in the summers of 1984 and 1985 in Morristown New Jersey and the summer of 1986 in Palo Alto California The structure of this workshop was unique no recent results no surveys Instead we asked for outstanding open prob lems in the field There are many famous open problems including the question P NP the simplex conjecture in communication theory the capacity region of the broadcast channel and the two helper problem in information theory Beyond these well defined problems are certain grand research goals What is the general theory of information flow in stochastic networks What is a comprehensive theory of computational complexity What about a unification of algorithmic complexity and computational complex ity Is there a notion of energy free computation And if so where do information theory communication theory computer science and physics meet at the atomic level Is there a duality between computation and communication Finally what is the ultimate impact of algorithmic com plexity on probability theory And what is its relationship to information theory The idea was to present problems on the first day try to solve them on the second day and present the solutions on the third day In actual fact only one problem was solved
