**Collaboration, Peer Review and Open Source Software** Justin Johnson, 2014  
Open source software development may be superior to proprietary development because the open source organizational form naturally minimizes transactions costs associated with privately distributed information, thereby avoiding certain agency problems. This manifests itself in the ability of open source communities to encourage collaborative sharing of ideas and critical peer review. When these activities are important, the open source organizational form endogenously may do better than a proprietary organizational form. The desire to improve quality by circumventing such agency concerns may induce the founder of a software project to choose the open source form, even though doing so foregoes potential profits, and this effect is magnified when there is an existing competing closed source project. The types of software best suited to open source development are identified.

*Open access and collaboration in research. Barriers to collaboration in academic publishing* Anna Severin, 2019-08-30  
Academic Paper from the year 2016 in the subject Book Science grade 1.0 University of Sussex language English abstract. This paper aims to review the scholarly literature offering criticism on the concept of open access (OA) publishing, in particular with regards to the effect of OA on researchers' collaborative working. Relevant literature is critically reviewed with the aim of identifying barriers to collaboration in academic publishing and as to what degree OA can mediate these. OA relates to research outputs that are free of any restrictions on access, such as subscription walls, and free of any restrictions on use and re-use of research outputs, such as copyright and license restrictions. Some scholars regard OA as a helpful tool for fostering collaborative work amongst researchers. Observing that scientific problems have become more complex and require a joint effort, these scholars argue that knowledge creation and dissemination could be more efficient if scientists worked together. The core requirement for collaboration among researchers is commonly identified as their ability to share information freely.
