Algorithms For Parallel Polygon Rendering:

Algorithms for Parallel Polygon Rendering Theoharis Theoharis, 2014-01-15 *High Performance Computing for Computer Graphics and Visualisation* Min Chen, Peter Townsend, John Vince, 2012-12-06 This book contains mainly a selection of papers that were presented at the International Workshop on High Performance Computing or Computer Graphics and Visualisation held in Swansea United Kingdom on 3-4 July 1995. The workshop was sponsored by the HEFCWI Initiative on Parallel Computing Foundations and Applications and it has provided the international computer graphics community with a platform for assessing and reviewing the impact of the development of high performance computing on the progress of computer graphics and visualisation, presenting the current use of high performance computing architecture and software tools in computer graphics and visualisation and the development of parallel graphics algorithms, identifying potential high performance computing applications in computer graphics and visualisation and encouraging members of the graphics community to think about their problems from the perspective of parallelism. The book is divided into six sections. The first section, which acts as the introduction of the book, gives an overview of the current state of the art. It contains a comprehensive survey by Whitman of parallel algorithms for computer graphics and visualisation and a discussion by Hansen on the past, present and future high performance computing applications in computer graphics and visualisation. The second section is focused on the design and implementation of high performance architecture, software tools and algorithms for surface rendering. **1995 Parallel Rendering Symposium (PRS 95)**, 1995 Massively Parallel Processing Applications and Development L. Dekker, W. Smit, J.C. Zuidervaart, 2013-10-22 The contributions of a diverse selection of international hardware and software specialists are assimilated in this book's exploration of the development of massively parallel processing (MPP). The emphasis is placed on industrial applications and collaboration with users and suppliers from within the industrial community consolidates the scope of the publication. From a practical point of view, massively parallel data processing is a vital step to further innovation in all areas where large amounts of data must be processed in parallel or in a distributed manner, e.g. fluid dynamics, meteorology, seismics, molecular engineering, image processing, parallel database processing. MPP technology can make the speed of computation higher and substantially reduce the computational costs. However, to achieve these features, the MPP software has to be developed further to create user-friendly programming systems and to become transparent for present-day computer software. Application of novel electro-optic components and devices is continuing and will be a key for much more general and powerful architectures. Vanishing of communication hardware limitations will result in the elimination of programming bottlenecks in parallel data processing. Standardization of the functional characteristics of a programming model of massively parallel computers will become established. Then efficient programming environments can be developed. The result will be a widespread use of massively parallel processing systems in many areas of application. **The First Aizu International Symposium on Parallel Algorithms/Architecture Synthesis**
