Classgroups And Hermitian Modules:

Classgroups and Hermitian Modules Albrecht Fröhlich, 2012-12-06 These notes are an expanded and updated version of a course of lectures which I gave at King's College London during the summer term 1979. The main topic is the Hermitian classgroup of orders and in particular of group rings. Most of this work is published here for the first time. The primary motivation came from the connection with the Galois module structure of rings of algebraic integers. The principal aim was to lay the theoretical basis for attacking what may be called the converse problem of Galois module structure theory to express the symplectic local and global root numbers and conductors as algebraic invariants. A previous edition of these notes was circulated privately among a few collaborators. Based on this and following a partial solution of the problem by the author Ph Cassou-Nogues and M Taylor succeeded in obtaining a complete solution. In a different direction J Ritter published a paper answering certain character theoretic questions raised in the earlier version. I myself disapprove of secret circulation but the pressure of other work led to a delay in publication. I hope this volume will make amends. One advantage of the delay is that the relevant recent work can be included. In a sense this is a companion volume to my recent Springer *Ergebnisse Bericht* where the Hermitian theory was not dealt with. Our approach is via Hom groups analogous to that followed in recent work on locally free classgroups.

Snaith, 2014-01-15 An advanced monograph on Galois representation theory by one of the world's leading algebraists this volume is directed at mathematics students who have completed a graduate course in introductory algebraic topology. Topics include Abelian and nonabelian cohomology of groups, characteristic classes of forms and algebras, explicit Brauer induction theory and much more. 1989 edition **Group Representations** Gregory Karpilovsky, 2016-06-06 This volume is divided into three parts. Part I provides the foundations of the theory of modular representations. Special attention is drawn to the Brauer-Swan theory and the theory of Brauer characters. A detailed investigation of quadratic symplectic and symmetric modules is also provided. Part II is devoted entirely to the Green theory, vertices and sources, the Green correspondence, the Green ring, etc. In Part III permutation modules are

investigated with an emphasis on the study of p permutation modules and Burnside rings The material is developed with sufficient attention to detail so that it can easily be read by the novice although its chief appeal will be to specialists A number of the results presented in this volume have almost certainly never been published before

Explicit Brauer Induction Victor Percy Snaithe, 1994-10-27 This 1994 book gave for the first time an entirely algebraic treatment of the technique of Explicit Brauer Induction **Mathematical Reviews**, 2004 **Current Engineering Practice**, 1985

Galois Module Structure of Algebraic Integers A. Fröhlich, 2012-12-06 In this volume we present a survey of the theory of Galois module structure for rings of algebraic integers This theory has experienced a rapid growth in the last ten to twelve years acquiring mathematical depth and significance and leading to new insights also in other branches of algebraic number theory The decisive take off point was the discovery of its connection with Artin L functions We shall concentrate on the topic which has been at the centre of this development namely the global module structure for tame Galois extensions of numberfields in other words of extensions with trivial local module structure The basic problem can be stated in down to earth terms the nature of the obstruction to the existence of a free basis over the integral group ring normal integral basis Here a definitive pattern of a theory has emerged central problems have been solved and a stage has clearly been reached when a systematic account has become both possible and desirable Of course the solution of one set of problems has led to new questions and it will be our aim also to discuss some of these We hope to help the reader early on to an understanding of the basic structure of our theory and of its central theme and to motivate at each successive stage the introduction of new concepts and new tools
