

READINGS FOR PSYC309A — COGNITIVE PROCESSES

There are two introductory points to make regarding the assigned readings. First, the goal in reading these papers isn't to perform a methodological critique. All studies have methodological flaws, shortcomings, and/or compromises if you look close enough, including **the** ones assigned. If you notice them, great—one of our primary goals in the undergraduate Psychology program is to help you become critical consumers of scientific claims. But for PSYC309a, our point in reading isn't to fixate on these kinds of issues. Rather, it's to take the data/findings/studies at face value and consider what they can help us to understand about human cognitive processes. Second, the course is not about research methods and/or statistics. So while you need to have a basic understanding of methods and statistics for each paper we read, for your own wellbeing, please realize that memorizing the finer-grained details of methods and statistics (including, for example, discussions concerning assumptions of variance structure that crop up in one or two papers over the term) will not be helpful to course performance. Or put more plainly, let's focus on what the research questions are and what papers seek to conclude or infer with respect to those questions, not the details of data collection and analysis.

How to Read the Papers

There are a few strategies to consider for readings these papers that will help you not only understand the papers themselves, but how to integrate the readings with what we cover/discuss in lecture. I don't give you a lot to read in this class, but I do expect you to spend quality time going through and understanding what I assign. To help you with this, here are my suggestions for how to approach each paper, suggestions I strongly suggest you follow if you want to optimize your learning and course performance:

- (1) When you are ready to read, turn off your phone and put it away.
- (2) Consider printing the paper out and reading the hard copy rather than the electronic version. There are at least two obvious advantages here. One is that it gets you off of your computer or tablet, and reduces the odds of technologically distracting yourself. Second, exams in this class are a pen and paper affair; as is well known in psychology, when we study in a manner that aligns with the conditions under which we are tested, we tend to have better test performance.
- (3) Read each paper before coming to the class for which it is assigned. If you come to class without having read the paper, you will be at a learning disadvantage relative to those students who do.
- (4) Don't just start to read the paper at the start and then plow forward. Instead, take the time to flip through it at first and get an idea of what the paper contains. Read the section headings and note what the figures and tables contain. If you try to familiarize
