Professionals in genetics and geriatrics, physical anthropology, forensic medicine, and the care and counseling of older persons will appreciate this discussion of the aging process as it affects the human skeleton. The author describes and explains the changing phylogenetic structure and functions of bone during advanced maturity, in changes that involve loss of mass and organ, bone strength and architecture, the skull, and the postcranial skeleton. A final chapter reviews deteriorating conditions common to aging with emphasis on osteoporosis and osteomyelitis. Clear explanations throughout the text and excellent technical illustrations enhance the appeal and readability of this book.
