Analytic capacity and measure John Garnett, 1972

Geometry of Sets and Measures in Euclidean Spaces Pertti Mattila, 1999-02-25 This book studies the geometric properties of general sets and measures in euclidean space

Analytic Capacity, Rectifiability, Menger Curvature and Cauchy Integral Hervé Pajot, 2002-11-26 Based on a graduate course given by the author at Yale University this book deals with complex analysis analytic capacity geometric measure theory rectifiable and uniformly rectifiable sets and harmonic analysis boundedness of singular integral operators on Ahlfors regular sets In particular these notes contain a description of Peter Jones geometric traveling salesman theorem the proof of the equivalence between uniform rectifiability and boundedness of the Cauchy operator on Ahlfors regular sets the complete proofs of the Denjoy conjecture and the Vitushkin conjecture for the latter only the Ahlfors regular case and a discussion of X Tolsa s solution of the Painlevé problem

Harmonic Analysis at Mount Holyoke William Beckner, 2003 This volume contains the proceedings of the conference on harmonic analysis and related areas The conference provided an opportunity for researchers and students to exchange ideas and report on progress in this large and central field of modern mathematics The volume is suitable for graduate students and research mathematicians interested in harmonic analysis and related areas

Vitushkin's Conjecture for Removable Sets James Dudziak, 2011-02-03 Vitushkin s conjecture a special case of Painlevé s problem states that a compact subset of the complex plane with finite linear Hausdorff measure is removable for bounded analytic functions if and only if it intersects every rectifiable curve in a set of zero arclength measure Chapters 1-5 of the book provide important background material on removability analytic capacity Hausdorff measure arclength measure and Garabedian duality that will appeal to many analysts with interests independent of Vitushkin s conjecture The fourth chapter contains a proof of Denjoy s conjecture that employs Melnikov curvature A brief postscript reports on a deep theorem of Tolsa and its relevance to going beyond Vitushkin s conjecture This text can be used for a topics course or seminar in complex analysis To understand it the reader should have a firm grasp of basic real and complex analysis

Seminar of Mathematical Analysis Genaro López Acedo, Rafael Villa Caro, 2004 This volume consists of the lecture notes of the Seminar on Mathematical Analysis which was held at the Universities of Malaga and Seville Septembere 2002 February 2003

Encyclopaedia of Mathematics Michiel Hazewinkel, 2013-12-01 This ENCYCLOPAEDIA OF MATHEMATICS aims to be a reference work for all parts of mathematics It is a translation with updates and editorial comments of the Soviet Mathematical Encyclopaedia published by Soviet Encyclopaedia Publishing House in five volumes in 1977-1985 The annotated translation consists of ten volumes including a special index volume There are three kinds of articles in this ENCYCLOPAEDIA First of all there are survey type articles dealing with the various main directions in mathematics where a

rather fine subdivision has been used. The main requirement for these articles has been that they should give a reasonably complete up to date account of the current state of affairs in these areas and that they should be maximally accessible. On the whole these articles should be understandable to mathematics students in their first specialization years to graduates from other mathematical areas and depending on the specific subject to specialists in other domains of science engineers and teachers of mathematics. These articles treat their material at a fairly general level and aim to give an idea of the kind of problems techniques and concepts involved in the area in question. They also contain background and motivation rather than precise statements of precise theorems with detailed definitions and technical details on how to carry out proofs and constructions. The second kind of article of medium length contains more detailed concrete problems results and techniques.

Potential Theory - Selected Topics Hiroaki Aikawa, Mats Essen, 1996-09-13. The first part of these lecture notes is an introduction to potential theory to prepare the reader for later parts which can be used as the basis for a series of advanced lectures seminars on potential theory harmonic analysis. Topics covered in the book include minimal thinness quasiadditivity of capacity applications of singular integrals to potential theory L_p capacity theory fine limits of the Nagel Stein boundary limit theorem and integrability of superharmonic functions. The notes are written for an audience familiar with the theory of integration distributions and basic functional analysis.

These proceedings start with the official report of the Congress given in the front pages a list of donors and a list of registered participants as well as the reports of the opening and closing ceremonies. The main body of the proceedings includes the papers presented by the 15 plenary speakers and 139 invited speakers selected by the Program Committee. These volumes are rounded off by the reports of the works of the four fields medalists V G Drinfeld V F R Jones S Mori E Witten and the winner of the Rolf Nevanlinna Prize A A Razborov.

A Real Variable Method for the Cauchy Transform, and Analytic Capacity Takafumi Murai, 2006-11-15. This research monograph studies the Cauchy transform on curves with the object of formulating a precise estimate of analytic capacity. The note is divided into three chapters. The first chapter is a review of the Calderón commutator. In the second chapter a real variable method for the Cauchy transform is given using only the rising sun lemma. The final and principal chapter uses the method of the second chapter to compare analytic capacity with integral geometric quantities. The prerequisites for reading this book are basic knowledge of singular integrals and function theory. It addresses specialists and graduate students in function theory and in fluid dynamics.
