Code Recognition and Set Selection with Neural Networks Clark Jeffries, 1994 **Code Recognition and Set Selection with Neural Networks** C. Jeffries, 2012-12-06

In mathematics there are limits speed limits of a sort on how many computational steps are required to solve certain problems The theory of computational complexity deals with such limits in particular whether solving an n dimensional version of a particular problem can be accomplished with say 2^n steps or will inevitably require 2^n steps Such a bound together with a physical limit on computational speed in a machine could be used to establish a speed limit for a particular problem But there is nothing in the theory of computational complexity which precludes the possibility of constructing analog devices that solve such problems faster It is a general goal of neural network researchers to circumvent the inherent limits of serial computation As an example of an n dimensional problem one might wish to order n distinct numbers between 0 and 1 One could simply write all $n!$ ways to list the numbers and test each list for the increasing property There are much more efficient ways to solve this problem in fact the number of steps required by the best sorting algorithm applied to this problem is proportional to $n \ln n$

Algorithms and Architectures Cornelius T. Leondes, 1998-02-09 This volume is the first diverse and comprehensive treatment of algorithms and architectures for the realization of neural network systems It presents techniques and diverse methods in numerous areas of this broad subject The book covers major neural network systems structures for achieving effective systems and illustrates them with examples This volume includes Radial Basis Function networks the Expand and Truncate Learning algorithm for the synthesis of Three Layer Threshold Networks weight initialization fast and efficient variants of Hamming and Hopfield neural networks discrete time synchronous multilevel neural systems with reduced VLSI demands probabilistic design techniques time based techniques techniques for reducing physical realization requirements and applications to finite constraint problems A unique and comprehensive reference for a broad array of algorithms and architectures this book will be of use to practitioners researchers and students in industrial manufacturing electrical and mechanical engineering as well as in computer science and engineering Radial Basis Function networks The Expand and Truncate Learning algorithm for the synthesis of Three Layer Threshold Networks Weight initialization Fast and efficient variants of Hamming and Hopfield neural networks Discrete time synchronous multilevel neural systems with reduced VLSI demands Probabilistic design techniques Time based techniques Techniques for reducing physical realization requirements Applications to finite constraint problems Practical realization methods for Hebbian type associative memory systems Parallel self organizing hierarchical neural network systems Dynamics of networks of biological neurons for utilization in computational neuroscience
