Developing Thinking Sara Meadows, 2017-09-13 How children's thinking develops and how it can be developed in education are among the most important questions in psychology. Studies of cognition in adults need to be supplemented by the developmental perspective which often transforms them. Educational objectives will be most efficiently achieved only if we understand children's thought. Like all important problems, the nature of developing thinking is far from simple. A wide variety of different approaches have been taken to it and in the few years before publication had come together to produce new understanding and new ideas. Originally published in 1983, each chapter in this book addresses itself to major issues in the area and the advances that were being made at the time.

The Child as Thinker Sara Meadows, 2012-09-10 This second edition of *The Child as Thinker* has been thoroughly revised and updated to provide an informed and accessible overview of the varied and extensive literature on children's cognition. Both theory and research data are critically examined and educational implications are discussed. After a brief discussion of the nature and subject of cognition, Sara Meadows reviews children's thinking in detail. She discusses the ways children remember and organise information in general, the acquisition of skills such as reading, writing and arithmetic, and the development of more complex reasoning as children grow to maturity. As well as studies that typically describe a generalised child, the book also reviews some of the main areas relevant to individual differences in normal cognitive development and critically examines three major models of cognitive development. In outlining the work of Piaget, information processing accounts, and neo-Vygotskian theories, she also evaluates their different explanations of cognitive development and their implications for education. Finally, the book examines biological and social factors that may be involved in normal and suboptimal cognitive development. Sara Meadows provides an important review of the crucial issues involved in understanding cognitive development and of the new data and models that have emerged in the last few years. This book brings together areas and approaches that have hitherto been independent and examines their strengths and weaknesses. *The Child as Thinker* is essential reading for all students of cognitive development.

Learning and Teaching Joseph Zajda, 1997 *Learning and Teaching* explores major and current themes in the learning-teaching process from an international and comparative perspective. The authors debate such issues as learning and cognitive processes, students in the classroom, and teaching styles. Their views are based on either the findings of original research or observation as experienced teacher-educators. Topics covered include learning enhancement, reflection in education, cognition, excellence in education, special schools, classroom interaction, discrimination, assessment, and what makes a good teacher. *Learning and Teaching* offers a unique introduction to significant issues affecting the nature of learning and the quality of student-teacher interaction in the classroom.
