Conflict-Controlled Processes A. Chikrii, 2013-03-14 This monograph covers one of the divisions of mathematical theory of control which examines moving objects functioning under conflict and uncertainty conditions To identify this range of problems we use the term conflict controlled processes coined in recent years As the name itself does not imply the type of dynamics difference ordinary differential difference differential integral or partial differential equations the differential games fall within its realms The problems of search and tracking moving objects are also referred to the field of conflict controlled process The contents of the monograph is confined to studying classical pursuit evasion problems which are central to the theory of conflict controlled processes These problems underlie the theory and are of considerable interest to researchers up to now It should be noted that the methods of Line of Sight Parallel Pursuit Proportional Navigation Modified Pursuit and others have been long and well known among engineers engaged in design of rocket and space technology An abstract theory of dynamic game problems in its turn is based on the methods originated by R Isaacs L S Pontryagin and N N Krasovskii and on the approaches developed around these methods At the heart of the book is the Method of Resolving Functions which was realized within the class of quasistrategies for pursuers and then applied to the solution of the problems of hand to hand group and successive pursuit

Stability and Control Processes Nikolay Smirnov, Anna Golovkina, 2022-03-15 The proceedings of the 4th Stability and Control Processes Conference are focused on modern applied mathematics stability theory and control processes The conference was held in recognition of the 90th birthday of Professor Vladimir Ivanovich Zubov 1930-2000 This selection of papers reflects the wide ranging nature of V I Zubov's work which included contributions to the development of the qualitative theory of differential equations the theory of

rigid body motion optimal control theory and the theory of electromagnetic fields It helps to advance many aspects of the theory of control systems including questions of motion stability nonlinear oscillations in control systems navigation and reliability of control devices vibration theory and quantization of orbits The disparate applications covered by the book in mechanical systems game theory solid state physics socio economic systems and medical and biological systems control automata and navigation are developments from Professor Zubov s in depth studies on the theory of stability of motion the theory of automatic control and the theory of the motions of optimal processes Stability and Control Processes presents research continuing the legacy of V I Zubov and updates it with sections focused on intelligence based control These proceedings will be of interest to academics professionals working in industry and researchers alike

Control Systems
Vsevolod Kuntsevich, Vyacheslav Gubarev, Yuriy Kondratenko, 2022-09-01 In recent years a considerable amount of effort has been devoted both in industry and academia towards the development of advanced methods of control theory with focus on its practical implementation in various fields of human activity such as space control robotics control applications in marine systems control processes in agriculture and food production Control Systems Theory and Applications consists of selected best papers which were presented at XXIV International conference on automatic control Automatics 2017 September 13 15 2017 Kyiv Ukraine organized by Ukrainian Association on Automatic Control National member organization of IFAC International Federation on Automatic Control and National University of Life and Environmental Sciences of Ukraine More than 120 presentations were discussed at the conference with participation of the scientists from the numerous countries The book is divided into two main parts a first on Theory of Automatic Control 5 chapters and the second on Control Systems Applications 8 chapters The selected chapters provide an overview of challenges in the area of control systems design modeling engineering and implementation and the approaches and techniques that relevant research groups within this area are employing to try to resolve these This book on advanced methods of control theory and successful cases in the practical implementation is ideal for personnel in modern technological processes automation and SCADA systems robotics space and marine industries as well as academic staff and master research students in computerized control systems automatized and computer integrated systems electrical and mechanical engineering
