Hitchens, Gabriella Longhitano, 2022-07-20 Over the past 30 years research on archaeological textiles has developed into an
important field of scientific study It has greatly benefited from interdisciplinary approaches which combine the application of
advanced technological knowledge to ethnographic textual and experimental investigations In exploring textiles and textile
processing such as production and exchange in ancient societies archaeologists with different types and quality of data have
shared their knowledge thus contributing to well established methodology In this book the papers highlight how researchers
have been challenged to adapt or modify these traditional and more recently developed analytical methods to enable
extraction of comparable data from often recalcitrant assemblages Furthermore they have applied new perspectives and
approaches to extend the focus on less investigated aspects and artefacts The chapters embrace a broad geographical and
chronological area ranging from South America and Europe to Africa and from the 11th millennium BC to the 1st millennium
AD Methodological considerations are explored through the medium of three different themes focusing on tools textiles and
fibres and culture and identity This volume constitutes a reflection on the status of current methodology and its applicability
within the wider textile field Moreover it drives forward the methodological debates around textile research to generate new
and stimulating conversations about the future of textile archaeology
