Advances In Parallel Algorithms:

Advances in Parallel Algorithms Ivan Dimov, O. Tonev, 1994 This text presents an overview of research in the subjects of computational linear algebra Monte Carlo algorithms and parallel algorithms in discrete mathematics Topics covered include theoretical investigations of numerical analysis and parallel algorithms and practical large scale problem solving such as modelling of semiconductor devices ballistic trajectory estimations and the simulation of distributed memory parallel computers

Parallel Computing Roman Trobec, Marián Vajteršic, Peter Zinterhof, 2009-06-18 The use of parallel programming and architectures is essential for simulating and solving problems in modern computational practice There has been rapid progress in microprocessor architecture interconnection technology and software development which are increasing directly the rapid growth of parallel and distributed computing However in order to make these benefits usable in practice this development must be accompanied by progress in the design analysis and application aspects of parallel algorithms In particular new approaches from parallel numerics are important for solving complex computational problems on parallel and or distributed systems The contributions to this book are focused on topics most concerned in the trends of today's parallel computing These range from parallel algorithmic programming tools network computing to future parallel computing Particular attention is paid to parallel numerics linear algebra differential equations numerical integration number theory and their applications in computer simulations which together form the kernel of the monograph We expect that the book will be of interest to scientists working on parallel computing doctoral students teachers engineers and mathematicians dealing with numerical applications and computer simulations of natural phenomena

[Advances in Randomized Parallel Computing](#) Panos M. Pardalos, Sanguthevar Rajasekaran, 2013-12-01 The technique of randomization has been employed to solve numerous problems of computing both sequentially and in parallel Examples of randomized algorithms that are asymptotically better than their deterministic counterparts in solving various fundamental problems abound Randomized algorithms have the advantages of simplicity and better performance both in theory and often in practice This book is a collection of articles written by renowned experts in the area of randomized parallel computing A brief introduction to randomized algorithms In the analysis of algorithms at least three different measures of performance can be used the best case the worst case and the average case Often the average case run time of an algorithm is much smaller than the worst case 2 For instance the worst case run time of Hoare's quicksort is $O(n^2)$ whereas its average case run time is only $O(n \log n)$ The average case analysis is conducted with an assumption on the input space The assumption made to arrive at the $O(n \log n)$ average run time for quicksort is that each input permutation is equally likely Clearly any average case analysis is only as good as how valid the assumption made on the input space is Randomized algorithms achieve superior performances without making any assumptions on the inputs by making coin flips within the algorithm Any analysis done of randomized algorithms will be valid for all possible inputs

Recent Advances in Parallel Virtual Machine and Message Passing Interface Dieter Kranzlmüller,Peter Kacsuk,Jack Dongarra,2004-11-29 The

message passing paradigm is the most frequently used approach to develop high performance computing applications on parallel and distributed computing architectures. Parallel Virtual Machine (PVM) and Message Passing Interface (MPI) are the two main representatives in this domain. This volume comprises 50 selected contributions presented at the 11th European PVM/MPI Users Group Meeting which was held in Budapest, Hungary, September 19-22, 2004. The conference was organized by the Laboratory of Parallel and Distributed Systems (LPDS) at the Computer and Automation Research Institute of the Hungarian Academy of Sciences (MTA SZTAKI). The conference was previously held in Venice, Italy (2003), Linz, Austria (2002), Santorini, Greece (2001), Balatonfüred, Hungary (2000), Barcelona, Spain (1999), Liverpool, UK (1998), and Krakow, Poland (1997). The first three conferences were devoted to PVM and were held in Munich, Germany (1996), Lyon, France (1995), and Rome, Italy (1994). In its eleventh year, this conference is well established as the forum for users and developers of PVM, MPI, and other message passing environments. Interactions between these groups have proved to be very useful for developing new ideas in parallel computing and for applying some of those already existent to new practical fields. The main topics of the meeting were evaluation and performance of PVM and MPI extensions, implementations and improvements of PVM and MPI parallel algorithms using the message passing paradigm, and applications in science and engineering. In addition, the topics of the conference were extended to include cluster and grid computing in order to reflect the importance of this area for the high performance computing community.

Recent Advances in Parallel Virtual Machine and Message Passing

Interface Yiannis Cotronis, Jack Dongarra, 2003-06-30. Parallel Virtual Machine (PVM) and Message Passing Interface (MPI) are the most frequently used tools for programming according to the message passing paradigm which is considered one of the best ways to develop parallel applications. This volume comprises 50 revised contributions presented at the Eighth European PVM/MPI Users Group Meeting which was held on Santorini, Thera, Greece, 23-26 September 2001.

The conference was organized by the Department of Informatics and Telecommunications, University of Athens, Greece. This conference has been previously held in Balatonfüred, Hungary (2000), Barcelona, Spain (1999), Liverpool, UK (1998), and Krakow, Poland (1997). The first three conferences were devoted to PVM and were held at the TU Munich, Germany (1996), the ENS Lyon, France (1995), and the University of Rome (1994). This conference has become a forum for users and developers of PVM, MPI, and other message passing environments. Interaction between these groups has proved to be very useful for developing new ideas in parallel computing and for applying some of those already existent to new practical fields. The main topics of the meeting were evaluation and performance of PVM and MPI extensions and improvements to PVM and MPI algorithms using the message passing paradigm and applications in science and engineering based on message passing. The conference included one tutorial on MPI and 9 invited talks on advances in MPI, cluster computing, network computing, Grid computing, and parallel programming and programming systems. These proceedings contain papers on the 46 oral presentations together with 4 poster presentations.
