Dynamics In Several Complex Variables:

    Dynamics in Several Complex Variables John Erik Fornæss, This is part of the CBMS lecture series held in Albany New York in June 1994 aimed to introduce the audience to the literature on complex dynamics in higher dimension These notes provide an easy to read introduction into the field This monograph then points readers towards technically more advanced literature   *Differentiable and Complex Dynamics of Several Variables* Pei-Chu Hu,Chung-Chun Yang,1999-07-31 This book gives a comprehensive and up to date survey on dynamics and related topics such as Fatou Julia type theory the Ergodic theorem and invariant sets hyperbolicity in differentiable or complex dynamics iterant ion theory on Pm complex dynamics in Cm and the foundations of differentiable and complex dynamics The main aims of this volume are firstly to advance the study of the above named topics and to establish the corresponding Fatou Julia results for complex manifolds and secondly to provide some advanced account of dynamical systems within the framework of geometry and analysis presented from a unified approach applicable to both real and complex manifolds Audience This work will be of interest to graduate students and researchers involved in the fields of global analysis analysis on manifolds several complex variables and analytic spaces partial differential equations differential geometry measure and integration   Algebraic and Geometric Dynamics in Several Complex Variables Marius V. Dabija,2000   **Dynamics in Several Complex Variables: Endomorphisms in Projective Spaces and Polynomial-like Mappings** Tien-Cuong Dinh,Nessim Sibony,2008   Function Theory of Several Complex Variables Steven George Krantz,2001 Emphasizing integral formulas the geometric theory of pseudoconvexity estimates partial differential equations approximation theory inner functions invariant metrics and mapping theory this title is intended for the student with a background in real and complex variable theory harmonic analysis and differential equations   **Holomorphic Dynamical Systems** Nessim Sibony,Dierk Schleicher,Dinh Tien Cuong,Marco Brunella,Eric Bedford,Marco Abate,2010-07-31 The theory of holomorphic dynamical systems is a subject of increasing interest in mathematics both for its challenging problems and for its connections with other branches of pure and applied mathematics A holomorphic dynamical system is the datum of a complex variety and a holomorphic object such as a self map or a vector eld acting on it The study of a holomorphic dynamical system consists in describing the asymptotic behavior of the system associating it with some invariant objects easy to compute which describe the dynamics and classify the possible holomorphic dynamical systems supported by a given manifold The behavior of a holomorphic dynamical system is pretty much related to the geometry of the ambient manifold for instance perbolic manifolds do no admit chaotic behavior while projective manifolds have a variety of different chaotic pictures The techniques used to tackle such pr lems are of variouskinds complexanalysis methodsof real analysis pluripotential theory algebraic geometry differential geometry topology To cover all the possible points of view of the subject in a unique occasion has become almost impossible and the CIME session in Cetraro on Holomorphic Dynamical Systems was not an exception   Value Distribution Theory and Related Topics Grigor A.

Barsegian,Ilpo Laine,Chung-Chun Yang,2006-05-02 The Nevanlinna theory of value distribution of meromorphic functions one of the milestones of complex analysis during the last century was c ated to extend the classical results concerning the distribution of of entire functions to the more general setting of meromorphic functions Later on a similar reasoning has been applied to algebroid functions subharmonic functions and meromorphic functions on Riemann surfaces as well as to alytic functions of several complex variables holomorphic and meromorphic mappings and to the theory of minimal surfaces Moreover several appli tions of the theory have been exploited including complex differential and functional equations complex dynamics and Diophantine equations The main emphasis of this collection is to direct attention to a number of recently developed novel ideas and generalizations that relate to the velopment of value distribution theory and its applications In particular we mean a recent theory that replaces the conventional consideration of counting within a disc by an analysis of their geometric locations Another such example is presented by the generalizations of the second main theorem to higher dimensional cases by using the jet theory Moreover s ilar ideas apparently may be applied to several related areas as well such as to partial differential equations and to differential geometry Indeed most of these applications go back to the problem of analyzing zeros of certain complex or real functions meaning in fact to investigate level sets or level surfaces *Equivalences of Holomorphic Mappings in One and Several Complex Variables* Adrian Jenkins,2005 *Proceedings Of The International Congress Of Mathematicians 2018 (Icm 2018) (In 4 Volumes)* Boyan Sirakov,Paulo Ney De Souza,Marcelo Viana,2019-02-27 The Proceedings of the ICM publishes the talks by invited speakers at the conference organized by the International Mathematical Union every 4 years It covers several areas of Mathematics and it includes the Fields Medal and Nevanlinna Gauss and Leelavati Prizes and the Chern Medal laudatios **Fractal Geometry and Applications: A Jubilee of Benoit Mandelbrot** Michel Laurent Lapidus,Machiel Van Frankenhuysen,2004 This volume offers an excellent selection of cutting edge articles about fractal geometry covering the great breadth of mathematics and related areas touched by this subject Included are rich survey articles and fine expository papers The high quality contributions to the volume by well known researchers including two articles by Mandelbrot provide a solid cross section of recent research representing the richness and variety of contemporary advances in and around fractal geometry In demonstrating the vitality and diversity of the field this book will motivate further investigation into the many open problems and inspire future research directions It is suitable for graduate students and researchers interested in fractal geometry and its applications This is a two part volume Part 1 covers analysis number theory and dynamical systems Part 2 multifractals probability and statistical mechanics and applications **The p-Harmonic Equation and Recent Advances in Analysis** Pietro Poggi-Corradini,2005 Comprised of papers from the IIIrd Prairie Analysis Seminar held at Kansas State University this book reflects the many directions of current research in harmonic analysis and partial differential equations Included is the work of the distinguished main speaker Tadeusz Iwaniec his invited guests John Lewis and Juan Manfredi and

many other leading researchers The main topic is the so called p harmonic equation which is a family of nonlinear partial differential equations generalizing the usual Laplace equation This study of p harmonic equations touches upon many areas of analysis with deep relations to functional analysis potential theory and calculus of variations The material is suitable for graduate students and research mathematicians interested in harmonic analysis and partial differential equations
