

# 1. A Brief Description of Calculus

In this lesson, you will learn how to use the calculus. You will learn how to use the calculus to find the area under a curve and how to find the volume of a solid.

There are two main branches of calculus: differential calculus and integral calculus. The first is the study of rates of change, and the second is the study of accumulation.

The second branch of calculus is differential calculus, which is the study of rates of change. It is used to find the slope of a curve at a given point, and to find the maximum and minimum values of a function.

Integration and differentiation are inverse processes. If you know the derivative of a function, you can find the original function. Similarly, if you know the original function, you can find the derivative.
