Bayesian Inference And Maximum Entropy Methods In Science And Engineering:

Bayesian Inference and Maximum Entropy Methods in Science and Engineering Rainer Fischer, Roland Preuss, Udo von Toussaint, 2004-11-19 All papers were peer reviewed Bayesian Inference and Maximum Entropy Methods in Science and Engineering provide a framework for analyzing ill conditioned data Maximum Entropy is a theoretical method to draw conclusions when little information is available Bayesian probability theory provides a formalism for scientific reasoning by analyzing noisy or incomplete data using prior knowledge

Bayesian Inference and Maximum Entropy Methods in Science and Engineering, **Bayesian Inference and Maximum Entropy Methods in Science and Engineering** Adriano Polpo, Julio Stern, Francisco Louzada, Rafael Izbicki, Hellinton Takada, 2018-07-12 These proceedings from the 37th International Workshop on Bayesian Inference and Maximum Entropy Methods in Science and Engineering MaxEnt 2017 held in S o Carlos Brazil aim to expand the available research on Bayesian methods and promote their application in the scientific community They gather research from scholars in many different fields who use inductive statistics methods and focus on the foundations of the Bayesian paradigm their comparison to objectivistic or frequentist statistics counterparts and their appropriate applications Interest in the foundations of inductive statistics has been growing with the increasing availability of Bayesian methodological alternatives and scientists now face much more difficult choices in finding the optimal methods to apply to their problems By carefully examining and discussing the relevant foundations the scientific community can avoid applying Bayesian methods on a merely ad hoc basis For over 35 years the MaxEnt workshops have explored the use of Bayesian and Maximum Entropy methods in scientific and engineering application contexts The workshops welcome contributions on all aspects of probabilistic inference including novel techniques and applications and work that sheds new light on the foundations of inference Areas of application in these workshops include astronomy and astrophysics chemistry communications theory cosmology climate studies earth science fluid mechanics genetics geophysics machine learning materials science medical imaging nanoscience source separation thermodynamics equilibrium and non equilibrium particle physics plasma physics quantum mechanics robotics and the social sciences Bayesian computational techniques such as Markov chain Monte Carlo sampling are also regular topics as are approximate inferential methods Foundational issues involving probability theory and information theory as well as novel applications of inference to illuminate the foundations of physical theories are also of keen interest
