efficiency This clear loss of effect CRT failure is frustrating and leaves HF patients in a steady and or advanced uncontrolled worsening state of clinical symptoms and NYHA class Several hypotheses have been conducted to explain this loss of effect investigating epigenetic microRNAs activation pattern echocardiography mechanical cardiac dyssynchrony assessment arrhythmias atrial fibrillating patients left ventricle lead positioning target wall and vessel and pacing modalities bipolar vs multipolar and epicardial approaches cardiac surgery to reach the target ventricular wall The selection criteria the implant technique and CRT monitoring are relevant aspects of the CRT world in all its complexity The necessity to follow and characterize CRT recipients responders vs non responders and the routine follow up with recent advancements in technology telemonitoring may be an instrument to improve CRT response entity and clinical outcomes The creation of a social platform social networks may represent a necessary and evolutionary step to share individual experiences and to exchange ideas about CRT recipients and experienced operators The opportunity to improve CRT responders percentage may represent a gold standard and an attractive prospective in failing heart patients CRT recipients In this book we have investigated these aspects hoping to provide to the reader the right reading tools in the CRT world Our message remains To help people suffering from cardiovascular diseases and to live better with their disease

**Devices for Cardiac Resynchronization:** S. Serge Barold, Philippe Ritter, 2007-11-22 The last of an ongoing series of Cardiostim monographs all devoted to cardiac pacing was published four years ago Since then cardiac resynchronization for the treatment of heart failure has undergone spectacular progress and has revolutionized device therapy Many patients have benefited from ventricular resynchronization often combined with an implantable cardioverter defibrillator More implantations are likely in the future as the indications continue to evolve with more attention being paid to the primary prevention of heart failure in selected patients and the treatment of earlier stages of left ventricular dysfunction Thus we felt it was time for the current Cardiostim monograph to focus exclusively on cardiac resynchronization so as to review the remarkable technologic and clinical
