Cotsbased Software Systems:

COTS-Based Software Systems Hakan Erdogmus, Tao Weng, 2003-07-01 This book constitutes the refereed proceedings of the Second International Conference on COTS Based Software Systems ICCBSS 2003 held in Ottawa Canada in February 2003 The 24 revised full papers presented were carefully reviewed and selected from numerous submissions The papers address all current issues on commercial off the shelf systems from the point of view of research and development as well as from the practitioner s application point of view

COTS-Based Software Systems John Dean, Andree Gravel, 2002-01-16 Modern software systems increasingly use commercial off the shelf COTS software products as building blocks In some cases major software systems are assembled with virtually no custom code in the system The use of COTS software products as components offers the promise of rapid delivery to end users shared development costs with other customers and an opportunity for expanding mission or business capabilities and performance as improvements are made in the commercial marketplace Few organizations today can afford the resources and time to replicate market tested capabilities Yet the promise of COTS products is too often not realized in practice There have been more failures than successes in using COTS software products The research and software practitioner communities have been working with COTS based software systems for a number of years There is now sufficient documented experience in the community to collect analyze and disseminate success stories common failings lessons learned and research advances The mounting experience shows that the effective use of COTS software products in major software systems demands new skills knowledge and abilities changed roles and responsibilities and different techniques and processes The International Conference on COTS Based Software Systems ICCBSS focuses on the challenges of building and maintaining systems that incorporate COTS software products The conference sponsors the National Research Council Canada the Software Engineering Institute and the University of Southern California Center for Software Engineering aim to bring together managers developers maintainers and researchers to share their expertise and experience

Effective use of COTS software products in major software systems demands new skills, knowledge, and abilities, changed roles and responsibilities, and different techniques and processes. The International Conference on COTS Based Software Systems (ICCBSS) focuses on the challenges of building and maintaining systems that incorporate COTS software products. The conference sponsors the National Research Council of Canada, the Software Engineering Institute, and the University of Southern California Center for Software Engineering. We aim to bring together managers, developers, maintainers, and researchers to share their expertise and experience.

COTS-Based Software Systems Rick Kazman, Dan Port, 2004-04-14

In the short space of about a decade, Commercial Off the Shelf (COTS) software has evolved from being a relatively minor aspect of software development to a management endorsed silver bullet solution for software development, a disruptive technology requiring people and organizations to extensively rethink their approaches to software development to an increasingly well understood software phenomenon for which effective solutions are being developed. Part of this understanding has been to recognize that different COTS application sectors can be at different stages of this evolution. Some sectors are just beginning to become COTS intensive. Some have evolved COTS solutions that are very well matched to their problem domain. Others, including most large scale applications, still involve their developers in rethinking how to adapt their traditional software architectures, processes, management practices, and personnel skills to accommodate economically attractive but complex combinations of powerful but incompletely compatible and independently evolving COTS products.

The series of International Conferences on COTS Based Software Systems (ICCBSS) has been established as a continuing forum for bringing together CBSS developers, suppliers, and researchers to summarize and discuss progress toward understanding and resolving CBSS problems. This year's conference theme, Matching Solutions to Problems, reflects this objective. We have been fortunate to have three outstanding keynote speakers: David Carr, Tricia Oberndorf, and Douglas Schmidt, who have contributed significantly both in analyzing CBSS problems and developing better CBSS solutions. The contributed papers and summaries of workshops, panels, and tutorials in these Proceedings give a good understanding of the nature and directions of evolution of CBSS problems and solutions. As has been my experience with previous ICCBSS Proceedings volumes, I believe that you will find lasting value in the content of the Proceedings.

The theme, Build and Conquer, chosen for this year's conference, fully represents what we the organizers want to put across to the software community: software development is an engineering discipline and not an artistic expression. Once we are ready to build our software systems using pieces previously built in similar to any other technology manufacturer, we will be able to conquer the software engineering process. If we take a look at other engineering disciplines such as car manufacturing, house appliances, or aeronautics, we see that the final products are built through the integration of multiple provider commercial components. These components are successfully integrated and constitute an important part of the final product. Most software related organizations still build software from scratch, omitting thousands of ready built commercially available software components.

that could be used very effectively during the development phase This year ICCBSS moves to Europe for the first time since the first conference took place in Orlando FL USA in 2002 The conference scope has enlarged over the years to include the Open Source community and Web Services technologies The reason for this is that I believe both are considered components off the shelf so many of the characteristics of COTS are also applied to Open Source and Web Services Due to this we will enjoy the presence of keynote speakers and researchers presenting on these two topics for the first time

Architecting Dependable Systems II Rogério de Lemos,Cristina Gacek,Alexander Romanovsky,2004-10-22 As software systems become ubiquitous the issues of dependability become more and more critical Given that solutions to these issues must be taken into account from the very beginning of the design process it is appropriate that dependability is addressed at the architectural level This book results from an effort to bring together the research communities of software architectures and dependability Inspired by the ICSE 2003 Workshop on Software Architectures for Dependable Systems the book focuses on topics relevant to improving the state of the art in architecting dependable systems The 15 thoroughly reviewed papers originate partly from the workshop others were solicited in order to achieve complete coverage of all relevant aspects The papers are organized into topical sections on architectures for dependability fault tolerance in software architectures dependability analysis in software architectures and industrial experience
