Mathematics for Young Children Marion H. Bird,2022-11-21 For many years increasing stress has been placed on the importance of giving the under sevens a good start in mathematics Originally published in 1991 Mathematics for Young Children shows how children as young as four and five and of all abilities can be encouraged to carry out their own mathematical explorations whilst covering the content of a prescribed curriculum A substantial part of the book

is taken up with actual case studies of children working with Marion Bird in a reception classroom fully illustrated with examples of the children's work. These case studies are then analysed to show how a prescribed syllabus can be effectively covered through an investigational approach a point which is of paramount importance to teachers concerned with the introduction of the National Curriculum. The role of the teacher too is examined carefully in order to identify those parts of a teacher's repertoire which seems to be particularly fruitful in encouraging young children's active mathematical thinking. Throughout readers are encouraged to apply and amend ideas to suit their own particular circumstances. *Chamber Concise Dictionary*, 2004

**Didactical Phenomenology of Mathematical Structures** Hans Freudenthal, 1986-11-30 The launch of a new book series is always a challenging event not only for the Editorial Board and the Publisher but also and more particularly for the first author. Both the Editorial Board and the Publisher are delighted that the first author in this series is well able to meet the challenge. Professor Freudenthal needs no introduction to anyone in the Mathematics Education field and it is particularly fitting that his book should be the first in this new series because it was in 1968 that he and Reidel produced the first issue of the journal *Educational Studies in Mathematics*. Breaking fresh ground is therefore nothing new to Professor Freudenthal and this book illustrates well his pleasure at such a task. To be strictly correct the ground which he has broken here is not new but as with Mathematics as an Educational Task and Weeding and Sowing it is rather the novelty of the manner in which he has carried out his analysis which provides us with so many fresh perspectives. It is our intention that this new book series should provide those who work in the emerging discipline of mathematics education with an essential resource and at a time of considerable concern about the whole mathematics curriculum this book represents just such a resource.
