Modernizing Applications with IBM CICS Russell Bonner,Sophie Green,Ezriel Gross,Jim Harrison,Debra Scharfstein,Will Yates,IBM Redbooks,2020-12-30 IBM CICS is a mixed language application server that runs on IBM Z Over the 50 years since CICS was introduced in 1969 enterprises have used the qualities of service QoSs that CICS provides to allow them to create high throughput and secure transactional applications that have powered their business As the IT landscape has evolved so has CICS to allow these applications to integrate with new platforms and still provide value to the rest of the business Because of this capability many businesses still rely on CICS to power their core applications This IBM Redpaper publication focuses on modernizing these CICS applications allowing them to integrate with cloud native applications This modernization can be achieved either by constructing application programming interfaces APIs that allow new cloud native applications to connect to your existing assets rewriting parts of your application in newer languages and hosting them back on CICS or by using CICS capabilities to extend your applications to provide new capabilities and functions The paper takes a traditional example application and shows you how it works Then the paper extends the example rewrites portions of its functions and enables its APIs It also explains how CICS applications can use continuous integration CI and continuous delivery CD to deliver test and deploy code into CICS easily and with quality

Computer Theology Timothy Jurgensen,Bertrand du Castel,Timothy M. Jurgensen,2008 Computers are complex tools of the human species To make them work well for us we have to specify their actions in very great detail When properly instructed networks of computers take on the trappings of human social orders

derived from the physiological characteristics and capabilities of our species To create a social order we engage in grouping mechanisms through which the actions of the individuals within the group are influenced From a technical perspective such grouping mechanisms form the trust environments within which we can effect policy Historically the most comprehensive such environments have been formed by religions Within a specific religion the policy framework is established by a statement of theology So if we connect all the dots when we want to tell our computers how to act in a manner paralleling human social orders we must define for them a theology So goes the rationale explored in great detail by the authors of Computer Theology Based on their combined tenure of almost a century working in the realms of computer systems and their ubiquitous networks du Castel and Jurgensen have expressed both social and computer systems through the same concepts The result offers a unique perspective on the interconnection between people and machines that we have come to understand as the World Wide Web
