Knowledge Acquisition, Modeling and Management Rudi Studer,2003-06-29 Past Present and Future of Knowledge Acquisition This book contains

the proceedings of the 11th European Workshop on Knowledge Acquisition Modeling and Management EKAW 99 held at Dagstuhl Castle Germany in May of 1999 This continuity and the high number of sessions reflect the mature status of the knowledge acquisition community Knowledge Acquisition started as an attempt to solve the main bottleneck in developing expert systems now called knowledge based systems Acquiring knowledge from a human expert

Various methods and tools have been developed to improve this process These approaches significantly reduced the cost of developing knowledge based systems However these systems often only partially fulfilled the task they were developed for and maintenance remained an unsolved problem This required a paradigm shift that views the development process of knowledge based systems as a modeling activity Instead of simply transferring human knowledge into machine readable code building a knowledge based system is now viewed as a modeling activity A so called knowledge model is constructed in interaction with users and experts This model need not necessarily reflect the already available human expertise Instead it should provide a knowledge level characterization of the knowledge that is required by the system to solve the application task Economy and quality in system development and maintainability are achieved by reusable problem solving methods and ontologies The former describe the reasoning process of the knowledge based system i.e. the algorithms it uses and the latter describe the knowledge structures it uses i.e. the data structures Both abstract from specific application and domain specific circumstances to enable knowledge reuse
