**The Diver's Reference Dictionary**, 1986 *Petroleum and Marine Technology Information Guide* J. Hutcheon, A. Myers, S. Oue, B. Rodden, J. Whittick, 2003-09-02 First published in 1981 as the Offshore Information Guide this guide to information sources has been hailed internationally as an indispensable handbook for the oil gas and marine industries

**Treasure** Phillip S. Olin, 1998 *Bibliography on Diving and Diving Safety for a Scientific Diving Program* Margaret A. Rioux, 1987 Diving scientific diving and diver safety are specialized subject areas not generally well represented in even the largest of academic libraries largely because of difficulties in locating appropriate items to include in the collection However in order to adequately fulfill his her responsibilities the Diving Safety Officer of a scientific diving program needs easy access to a broad range of books reports and journals covering all aspects of diving This bibliography outlines a comprehensive collection appropriate to the needs of a scientific diving program in a research or academic institution Items are grouped in broad subject areas corresponding to various aspects of the diving program Both title and author indexes are also included

**Ocean News & Technology**, 1997 **Catalogue of books in the reference library, including technical section.** [With] Edinburgh publ. libr, 1891 **A new companion to the Romance languages** Martin Glessgen, 2024-09-03 The Romance languages offer unique potential for empirical analysis and methodological innovation within the vast field of linguistics due to the survival of a large body of historical documentation the rich diversity of dialects and languages and the exceptional quality of the research undertaken to date However these same factors have led to an ever increasing volume of material available for study requiring the establishment of a shared canonical knowledge base This companion offers a balanced overview of the core subjects and the methodology which make up the field of Romance linguistics It provides a solid foundation in the discipline as well as easy and convenient access to highly specialised areas of research by means of systematic references to the latest handbooks and encyclopedias The companion is designed to be read from cover to cover or to be consulted for information on specific topics Advanced students early career researchers lecturers specialists of other languages philologists and historians alike will all benefit from this accessible and up to date reference work as it enables readers to contextualise any knowledge of the discipline they may already possess *Geothermal Heat Flux at the COST B-2 and B-3 Wells, U. S. Atlantic Continental Margin* B. Della Vedova, 1987 Heat flow estimates at two sites on the U S Atlantic continental margin are presented An estimate of the heat flowing from the basement also has been obtained About 4 8 km of sediments penetrated at the COST B 2 and 4 0 km at the COST B 3 were deposited since the Upper Jurassic Well logs were used to evaluate thermal gradients and sedimentation rates whereas thermal conductivities and radiogenic heat productions were measured on drill cuttings samples A procedure to estimate in situ thermal conductivity from drill cuttings and well logs is described A substantial set of samples in the form of drill cuttings were sorted in four major lithologies sandstones siltstones shales and limestones Laboratory measurements of density porosity thermal conductivity quartz % potassium %

uranium ppm and thorium ppm were performed on 128 reorganized and pulverized samples A significant correlation of the matrix thermal conductivity to quartz and potassium content was found In situ porosity and volume fraction of each lithology determined mainly from well logs were used to calculate in situ mean thermal conductivity Finally the mean in situ vertical component of the thermal conductivity as required for heat flow values has been estimated from a correction factor for the anisotropy of each lithology The in situ temperature and anisotropy effects substantially decrease estimates of thermal conductivity at depth Below the uppermost 1 km in both wells the best estimate of the thermal gradient is 26.3 C km<sup>-1</sup> at COST B 2 and 26.1 C km<sup>-1</sup> at COST B 3 whereas in situ mean thermal conductivities range between about 1.8 and 1.9 W m<sup>-1</sup> K<sup>-1</sup> The average heat flow is estimated as about 45 mW m<sup>-2</sup> at COST B 2 and 44 mW m<sup>-2</sup> at COST B 3 with an uncertainty of about 20-25% The mean radiogenic production in sediments at the two sites has been estimated as 1.83 COST B 2 and 1.44 COST B 3 10<sup>6</sup> W m<sup>-3</sup> With a 12-14 km thick sedimentary sequence a radioactive contribution of 20-25 mW m<sup>-2</sup> can be expected The effects of sediment deposition compaction pore water advection and radiogenic heat production have been combined in a numerical model Hutchison 1985 to estimate the undisturbed basement heat flux Although the sedimentation depresses the basement heat flux by 15-20% this effect is more than compensated by radioactive heat production in the sediments so that the surface flux is estimated to be higher than that from the basement The latter is calculated at about 33-39 mW m<sup>-2</sup> a relatively low value The overall uncertainty is about 20-25% and other estimates on continental margins with thick sediments e.g. Reiter and Jessop 1985 probably have at least a similar uncertainty
