Ecological Informatics Friedrich Recknagel, 2006-05-21 Ecological Informatics promotes interdisciplinary research between ecology and computer science on elucidation of principles of information processing in ecosystems ecological sustainability by informed decision making and bio inspired computation The 2nd edition of the book consolidates the scope concepts and techniques of this newly emerging discipline by a new preface and additional chapters on cellular automata qualitative reasoning hybrid evolutionary algorithms and artificial neural networks It illustrates numerous applications of Ecological Informatics for aquatic and terrestrial ecosystems image recognition at micro and macro scale as well as computer hardware design Case studies focus on applications of artificial neural networks evolutionary computation cellular automata adaptive agents fuzzy logic as well as qualitative reasoning The 2nd edition of the book includes an index with novel evolutionary algorithms for the discovery of multiple nonlinear functions and rule sets as well as parameter optimisation in complex ecological data

Ecological Informatics Friedrich Recknagel, William K. Michener, 2017-09-21 This book introduces readers to ecological informatics as an emerging discipline that takes into account the data intensive nature of ecology the valuable information to be found in ecological data and the need to communicate results and inform decisions including those related to research conservation and resource management At its core ecological informatics combines developments in information technology and ecological theory with applications that facilitate ecological research and the dissemination of results to scientists and the public Its conceptual framework links ecological entities genomes organisms populations communities ecosystems landscapes with data management analysis and synthesis and communicates new findings to inform decisions by following the course of a loop In comparison to the 2nd edition published in 2006 the 3rd edition of Ecological Informatics has been completely restructured on the basis of the generic conceptual framework provided in Figure 1 It reflects the significant advances in data management analysis and synthesis that have been made over the past 10 years including new remote and in situ sensing techniques the emergence of ecological and environmental observatories novel evolutionary computations for knowledge discovery and forecasting and new approaches to communicating results and informing decisions
