Discrete Time Dynamic Models:

Discrete-time Dynamic Models Ronald K. Pearson, 1999 Fueled by advances in computer technology model based approaches to the control of industrial processes are now widespread While there is an enormous literature on modeling the difficult first step of selecting an appropriate model structure has received almost no attention This book fills the gap providing practical insight into model selection for chemical processes and emphasizing structures suitable for control system design

Dynamical Modeling of Biological Systems Stilianos Louca, 2023-06-07 This book introduces concepts and practical tools for dynamical mathematical modeling of biological systems Dynamical models describe the behavior of a system over time as a result of internal feedback loops and external forcing based on mathematically formulated dynamical laws similarly to how Newton's laws describe the movement of celestial bodies Dynamical models are increasingly popular in biology as they tend to be more powerful than static regression models This book is meant for undergraduate and graduate students in physics applied mathematics and data science with an interest in biology as well as students in biology with a strong interest in mathematical methods The book covers deterministic models for example differential equations stochastic models for example Markov chains and autoregressive models and model independent aspects of time series analysis Plenty of examples and exercises are included often taken or inspired from the scientific literature and covering a broad range of topics such as neuroscience cell biology genetics evolution ecology microbiology physiology epidemiology and conservation The book delivers generic modeling techniques used across a wide range of situations in biology and hence readers from other scientific disciplines will find that much of the material is also applicable in their own field Proofs of most mathematical statements are included for the interested reader but are not essential for a practical understanding of the material The book introduces the popular scientific programming language MATLAB as a tool for simulating models fitting models to data and visualizing data and model predictions The material taught is current as of MATLAB version 2022b The material is taught in a sufficiently general way that also permits the use of alternative programming languages

Time Series Modeling of Neuroscience Data Tohru Ozaki, 2012-01-26 Recent advances in brain science measurement technology have given researchers access to very large scale time series data such as EEG MEG data 20 to 100 dimensional and fMRI 140 000 dimensional data To analyze such massive data efficient computational and statistical methods are required Time Series Modeling of Neuroscience Data shows how to

Dynamic Modelling of Time-to-Event Processes Gangaram S. Ladde, Emmanuel A. Appiah, Jay G. Ladde, 2025-10-20 Dynamic Modelling of Time to Event Processes covers an alternative dynamic modelling approach for studying time to event processes This innovative approach covers some key elements including the Development of continuous time state of dynamic time to event processes an Introduction of an idea of discrete time dynamic intervention processes Treating a time to event process operating functioning under multiple time scales formulation of continuous and discrete time interconnected dynamic system as hybrid dynamic time to event process

Utilizing Euler type discretized schemes developing theoretical dynamic algorithms and more Additional elements of this process include an Introduction of conceptual and computational state and parameter estimation procedures Developing multistage a robust mean square suboptimal criterion for state and parameter estimation and Extending the idea conceptual computational simulation process and applying real datasets Presents a dynamic approach which does not require a closed form survival reliability distribution Provides updates that are independent of existing Maximum likelihood Bayesian and Nonparametric methods Applies to nonlinear and non stationary interconnected large scale dynamic systems Includes frailty and other models in survival analysis as case studies *A Primer on Population Dynamics Modeling* Hiromi Seno,2022-11-16 This textbook provides an introduction to the mathematical models of population dynamics in mathematical biology The focus of this book is on the biological meaning translation of mathematical structures in mathematical models rather than simply explaining mathematical details and literacies to analyze a model In some recent usages of the mathematical model simply with computer numerical calculations the model includes some inappropriate mathematical structure concerning the reasonability of modeling for the biological problem under investigation For students and researchers who study or use mathematical models it is important and helpful to understand what mathematical setup could be regarded as reasonable for the model with respect to the relation between the biological factors involved in the assumptions and the mathematical structure of the model Topics covered in this book are modeling with geometric progression density effect in population dynamics deriving continuous time models from discrete time models basic modeling for birth death stochastic processes continuous time models modeling interspecific reaction for the continuous time population dynamics model competition and prey predator dynamics modeling for population dynamics with a heterogeneous structure of population qualitative analysis on the discrete time dynamical system necessary knowledge about fundamental mathematical theories to understand the dynamical nature of continuous time models The book includes popular topics in ecology and mathematical biology as well as classic theoretical topics By understanding the biological meaning of modeling for simple models readers will be able to derive a specific mathematical model for a biological problem by reasonable modeling The contents of this book is made accessible for readers without strong Mathematical background [Principles of Object-Oriented Modeling and Simulation with Modelica 2.1](#) Peter Fritzson,2004-01-22 Provides an introduction to modern object oriented design principles and applications for the fast growing area of modeling and simulation Covers the topic of multi domain system modeling and design with applications that have components from several areas Serves as a reference for the Modelica language as well as a comprehensive overview of application model libraries for a number of application domains [Integrated Tracking, Classification, and Sensor Management](#) Mahendra Mallick,Vikram Krishnamurthy,Ba-Ngu Vo,2012-12-03 A unique guide to the state of the art of tracking classification and sensor management This book addresses the tremendous progress made over the last few decades in algorithm development and mathematical analysis for filtering multi target multi sensor tracking

sensor management and control and target classification It provides for the first time an integrated treatment of these advanced topics complete with careful mathematical formulation clear description of the theory and real world applications Written by experts in the field Integrated Tracking Classification and Sensor Management provides readers with easy access to key Bayesian modeling and filtering methods multi target tracking approaches target classification procedures and large scale sensor management problem solving techniques Features include An accessible coverage of random finite set based multi target filtering algorithms such as the Probability Hypothesis Density filters and multi Bernoulli filters with focus on problem solving A succinct overview of the track oriented MHT that comprehensively collates all significant developments in filtering and tracking A state of the art algorithm for hybrid Bayesian network BN inference that is efficient and scalable for complex classification models New structural results in stochastic sensor scheduling and algorithms for dynamic sensor scheduling and management Coverage of the posterior Cramer Rao lower bound PCRLB for target tracking and sensor management Insight into cutting edge military and civilian applications including intelligence surveillance and reconnaissance ISR With its emphasis on the latest research results Integrated Tracking Classification and Sensor Management is an invaluable guide for researchers and practitioners in statistical signal processing radar systems operations research and control theory
